I. Introduction

Today, the world is facing a number of significant environmental and social (E&S) challenges. Climate change, deforestation and habitat loss, water quality and availability, waste, and the impact of development on communities and, especially, indigenous peoples, are just some of the threats that create risks for society and businesses, if they are not appropriately addressed. As a global financial institution, JPMorgan Chase & Co. (together with its subsidiaries, JPMorgan Chase or we) recognizes that our business decisions have the potential to impact the environment and surrounding communities. This is why understanding our clients’ approach to E&S issues is an important component of our risk management process. It helps us make more informed decisions, and in certain circumstances enables us to offer our clients information and guidance on good practices when they are seeking to access capital markets, provide disclosures to investors or improve sustainability practices. We believe our firm can play a valuable role to help our clients manage their E&S impacts.

JPMorgan Chase adopted its first comprehensive Environmental and Social Risk Governance Policy (E&S Risk Policy) in 2005. That same year, we published our first Environmental and Social Policy Framework (E&S Framework) to articulate the tenets of that policy and how the firm approaches E&S issues across our business. As our efforts have evolved, we have updated our E&S Framework to reflect current practice, including our standards and processes. This document is just one of the ways that JPMorgan Chase communicates about our efforts on sustainability and environmental, social and governance (ESG) matters. We also publish an ESG Report annually and, in May 2019, we published a report on the firm’s approach to managing climate-related risks and opportunities, guided by recommendations of the Task Force on Climate-related Financial Disclosures (TCFD). For purposes of the E&S Framework, we refer to legal entities that we do business with as clients. These reports, alongside other information, can be found on our website at www.jpmorganchase/esg.

II. Environmental and Social Risk Management

A. Our Approach to Risk Management

The firm’s overall objective is to manage our businesses – and the associated risks – in a manner that balances serving the interests of our clients, customers and investors while protecting the firm’s safety and soundness. An important component of the firm’s risk management process is assessing our clients’ approach to, and performance on, E&S matters. Failing to appropriately manage E&S issues can directly impact our reputation, our clients’ operations and long-term economic viability, and the communities and environment in which we and our clients operate.

JPMorgan Chase has a multifaceted approach to managing the E&S risks associated with its financial products and services. Global Environmental and Social Risk Management (GESRM) establishes the firmwide E&S Risk Policy and standards outlining the risk governance requirements for the consistent identification, escalation and management of transactions and activities that may present an increased E&S risk. At the transactional level, GESRM assesses a client’s commitment and capacity to manage E&S issues, reviews its associated track record and engages directly with clients to discuss E&S practices, where appropriate (See Section II. E. Transaction Reviews).
B. Principles

JPMorgan Chase adheres to a range of internationally-recognized principles of best practice to assess E&S impacts and promote responsible performance. These include:

- United Nations Universal Declaration of Human Rights
- Wolfsberg Principles (anti-money laundering)
- Equator Principles
- Green Bond Principles
- Extractive Industries Transparency Initiative*
- Soft Commodities Compact
- United Nations Principles for Responsible Investment*

*Through our Asset and Wealth Management line of business

C. Environmental and Social Risk Policy Scope

The E&S Risk Policy applies to certain transactions in the Corporate and Investment Bank, Commercial Banking, Consumer and Community Banking and Asset and Wealth Management (together the Lines of Business or LOBs) in sectors and countries that we view as having the greatest potential for significant E&S impacts, in accordance with JPMorgan Chase policies and standards. The Equator Principles (EP) and the International Finance Corporation (IFC) Performance Standards frameworks have informed the development of our E&S Risk Policy. However, our E&S Risk Policy applies to a broader range of financial products. The following are examples of types of transactions referred to GESRM irrespective of dollar amount:

- Project finance transactions (including advisory and principal investments)
- Bilateral and syndicated loans (including project-related corporate loans and bridge loans as defined under the Equator Principles)
- Equity security offerings
- Debt security offerings
- Private placements
- Advisory assignments

D. Prohibited Activities

The following section outlines activities prohibited by our internal standards.

- **Modern Slavery and Child Labor:** JPMorgan Chase will not provide lending, capital markets or advisory services to clients where there is evidence of forced or child labor, human trafficking or slavery.
- **World Heritage Sites:** JPMorgan Chase will not provide project financing or other forms of asset-specific financing where the proceeds will be used to develop within UNESCO World Heritage sites, unless there is prior consensus from both the host government authorities and UNESCO that such operations will not adversely affect the Outstanding Universal Value of the site;
- **Coal:**
  - **Prohibition on development of greenfield coal mines:** JPMorgan Chase will not provide project financing or other forms of asset-specific financing where the proceeds will be used to develop a new greenfield coal mine. (See Section E2c below for additional details on the firm's approach for transactions involving coal)
  - **Prohibition on financing for coal mining clients:** JPMorgan Chase will not provide lending, capital markets or advisory services to clients deriving the majority of their revenues from the extraction of coal. By the end of 2024, we will also phase out our remaining credit exposure to such clients.
• **Prohibition on financing to clients involved in mountaintop mining:** Mountaintop mining (which includes mountaintop removal mining) is a method of removing all or a portion of a mountain or ridge to access coal seams near the surface. JPMorgan Chase will not provide lending, capital markets or advisory services to coal mining clients involved in mountaintop mining.

• **Coal-fired power generation:**
  • **Prohibition on financing of new coal-fired power plants:** JPMorgan Chase will not provide project financing or other forms of asset-specific financing where the proceeds will be used to develop a new coal-fired power plant or refinance an existing coal-fired power plant. Coal-fired power plants utilizing carbon capture and sequestration technology will be considered on a case-by-case basis.
  • **The Arctic:** JPMorgan Chase will not provide project financing or other forms of asset-specific financing where the proceeds will be used for new upstream, midstream or downstream greenfield oil and gas development in the Arctic, including the Arctic National Wildlife Refuge.\(^1\)
  • **Illegal logging:** JPMorgan Chase will not provide lending, capital markets or advisory services to clients where there is evidence of illegal logging.
  • **Illegal wildlife trafficking:** JPMorgan Chase will not provide lending, capital markets or advisory services to clients where there is evidence of illegal wildlife trafficking.
  • **Uncontrolled fire:** JPMorgan Chase will not provide lending, capital markets or advisory services to clients where there is evidence of intentional burning of tropical forest and/or peatlands for agricultural purposes.

### E. Clients and Transaction Reviews

#### 1. Environmental and Social Review (E&S Review)
Where a transaction is within scope of our E&S Risk Policy and standards, GESRM is responsible for conducting an E&S Review to evaluate factors including the following:

- The industry/sector and location(s) where a client is operating
- How the client proposes using financing proceeds
- Specific types of commercial activity that present heightened E&S risks

The E&S Review assesses the client’s approach to E&S risk management at the corporate level, the specific E&S impacts at the asset level (e.g., for asset specific financing), or both. The E&S Review focuses on a client’s commitment and capacity to manage the risks relevant to its activities, including the client’s policy, governance, risk management and stakeholder engagement approaches. In addition, a client’s track record of E&S impact management is reviewed. An E&S Review evaluates clients against a set of sector-appropriate E&S indicators and utilizes in-house expertise and publicly available documentation (e.g., public and regulatory filings, media and academic resources), and direct client engagement, where appropriate. This insight helps us make more informed decisions and in certain circumstances enables us to offer our clients information and guidance on good practices when they are seeking to access capital markets, provide disclosures to investors or improve sustainability practices.

#### 2. Sensitive Sectors and Activities Requiring Enhanced Review

In accordance with our internal standards, certain sectors and activities require a tailored approach to ensure a comprehensive understanding of the transaction and associated risks. Where a client is involved in a sensitive sector, activity or location, in accordance with JPMorgan Chase policies and standards, or where we identify additional issues during a standard E&S Review, an Enhanced Review will be required. This process may entail sector/issue specific due diligence questions including a determination of whether a client holds specific sector certifications, direct client engagement, site visits and risk mitigation plans. An Enhanced Review may result in placing some conditions on certain future activities or transactions. Below we describe examples of sectors and activities subject to Enhanced Review.

---

\(^1\) For prohibitions, JPMorgan Chase utilizes a definition based on a 10°C July Isotherm boundary, meaning the area does not experience temperatures above 10°C.
a. Oil Sands Development: Any transaction with a client involved in oil sands development will be subject to Enhanced Review. This will focus on the client's management of water discharge, use of fresh water, impacts to biodiversity, interactions with First Nations communities, the type of technology deployed (and its environmental footprint) and the client's compliance with Canadian permitting requirements.

b. The Arctic: Irrespective of sector, transactions and new greenfield development (not prohibited above) within the broader Arctic region will be subject to Enhanced Review. 1

c. Coal
   i. Coal mining: JPMorgan Chase will apply enhanced due diligence to transactions with diversified mining and industrial clients where proceeds will be used to finance new coal mining capacity.
   ii. Coal-fired power generation: JPMorgan Chase expects that the proportion of coal-fired technology contained in power generation portfolios financed by the firm will continue to decline.

We will continue to apply enhanced due diligence to non-prohibited transactions involving coal-fired power generation and consider the type of technology, regulatory drivers and the client's commitment, capacity and track record in managing E&S risks.

d. Large Hydroelectric Plants:
Transactions involving the construction of dams for hydroelectric power projects with more than 20MW of installed capacity assessed using the International Hydropower Association Sustainability Assessment Protocol.

e. Soft Commodities
   i. Palm oil
      i. Growers / producers (plantations and mills): We require Roundtable on Sustainable Palm Oil (RSPO) membership and the adoption of a No Deforestation, No Peat and No Exploitation (NDPE) Policy. We require RSPO certification or a time bound plan to achieve certification within a reasonable timeframe. There will be additional due diligence on controversies, active RSPO complaints, and other sensitive issues.
      ii. Refineries: We require RSPO membership and the adoption of a NDPE Policy, along with RSPO certification or a time bound plan to achieve certification within a reasonable timeframe. We also require a chain of custody certification.
      iii. Traders: We expect RSPO membership, along with a sustainable sourcing policy that includes a target to achieve 100% RSPO certified sourcing, and a RSPO chain of custody certification.
   ii. Soy
      i. Growers / producers (non US): We require Roundtable on Responsible Soy (RTRS) certification, along with additional due diligence on any known controversies.
      ii. Processors / traders (purchasing non US soy): We expect sustainable sourcing policies in place and a RTRS chain of custody certification.
   iii. Timber
      i. Growers / producers: We require certification by Forest Stewardship Council (FSC), Sustainable Forestry Initiative (SFI), or Program for the Endorsement of Forest Certification (PEFC), along with additional due diligence on any known E&S related controversies.
      ii. Pulp and paper: We expect adoption of a sustainable sourcing policy and chain of custody certification.

1 For the broader Arctic region, JPMorgan Chase utilizes the definition according to the Arctic Monitoring and Assessment Programme.
See also Section IV. A. Transactions Pertaining to Forests and Enhanced Review.

3. Escalation Process

In cases where significant issues are identified, GESRM may escalate clients and transactions to one of the firm's Reputation Risk Committees.

III. Climate Change

Climate change is a critical challenge that has presented, and will continue to present, risks for businesses and communities around the world. To curb the most significant negative impacts of climate change, businesses, governments, civil society and consumers must work together to facilitate the transition to a low-carbon economy. The latest research from the Intergovernmental Panel on Climate Change (IPCC), the leading international body of climate change scientists, found that climate change will have far more severe consequences, especially for the world's most poor and vulnerable populations, if temperatures rise more than 1.5°C above preindustrial levels.

As a global financial institution, we lend to, raise capital for and invest in clients operating in a diverse array of industries. These include clean energy and technology clients developing low-carbon products, clients that produce fossil fuels and clients that rely heavily on such fuels for energy or as inputs for other products. The world will need to continue to use fossil fuels for the foreseeable future — even as efforts are made to increase market penetration of low-carbon energy sources and to develop new technologies that can advance deep decarbonization. Our objective is to support clients that are thinking strategically about this transition and that are positioning themselves to decarbonize over time. We also aim to expand our financing for those clients focused on renewables and other low-carbon technologies and solutions.

A. Net Zero Banking Alliance

The world is not on track to achieve net zero emissions by 2050. While thoughtful policy, technology, and behavioural advancements are all prerequisites in realizing our common goals around net zero emissions by 2050, we have joined the Net Zero Banking Alliance (NZBA) because we support the ambition for greater climate action, the sharing of best practices and a collaborative approach between the public and private sectors to reach this goal.

Achieving net zero emissions globally by 2050 is no small challenge. Reducing greenhouse gas emissions on a massive scale — while meeting the world’s growing demand for energy — requires collective action and cooperation across the public and private sectors. It will require thoughtful policy and investments that expand deployment of renewable technologies and promote nature-based solutions. It also requires the development and commercialization of new low- and zero-carbon technologies — especially for heavy industry, manufacturing, transportation and other applications where such alternatives are not yet commercially available.

We may further address important details of these efforts as they develop over time, including where we believe practical considerations may constrain our work against the ambitions of the NZBA — such as the necessity of technological advancements, the evolution of consumer behavior, the need for thoughtful climate policies around the world, the challenge of balancing short-term targets with the need to facilitate an orderly and just transition, and other critical considerations such as legal and regulatory obligations.

B. Perspective on Climate Policy

Although the private sector has a significant role to play, public-sector leadership is needed to drive substantial carbon emission reduction on a global scale. Governments will need to work together to foster new technology
C. Thought Leadership on Climate-Related Risks

We engage with our peers and civil society in the ongoing dialogue about climate-related risks. JPMorgan Chase serves on the Financial Stability Board’s Task Force on Climate-related Financial Disclosures (TCFD), which has developed recommendations for the voluntary disclosure of information pertaining to the risks that may be driven by climate change. In May 2019, JPMorgan Chase published its first report on climate related risks and opportunities, informed by the TCFD recommendations.

IV. Forests and Biodiversity

Forests are home to more than half of all terrestrial species and support the livelihoods of millions of people. They are sources of food, medicine, lumber, tourism, recreation and aesthetic benefits. They sequester carbon, cleanse water and cycle nutrients. In spite of their critical importance, many forests around the world are under threat. In addition, the decline in high ecological-value forests and protected areas results in the loss of critical biodiversity as natural habitats are destroyed.

A. Transactions Pertaining to Forests and Enhanced Review

Transactions where we are able to identify that the client has operations in one of the following locations, or transactions where the use of proceeds is designated for assets to be developed in one of the following locations, will be subject to Enhanced Review (See Section II. E. Transaction Reviews):

- **Internationally recognized areas**: Internationally recognized areas are defined as UNESCO Natural World Heritage Sites, UNESCO Man and the Biosphere Reserves, Key Biodiversity Areas and wetlands designated under the Convention on Wetlands of International Importance (the Ramsar Convention).

- **Legally protected areas**: Legally protected areas are clearly defined geographical space that is recognized, dedicated and managed, through legal means, to achieve the long-term conservation of nature with associated ecosystem services and cultural values. This includes the International Union for Conservation of Nature Protected Area categories I-VI.

- **Critical habitats**: Critical habitats are areas with high biodiversity value, including (i) habitat of significant importance to Critically Endangered and/or Endangered species; (ii) habitat of significant importance to endemic and/or restricted-range species; (iii) habitat supporting globally significant concentrations of migratory species and/or congregatory species; (iv) highly threatened and/or unique ecosystems; and/or (v) areas associated with key evolutionary processes.

- **High conservation value forests**: High conservation value forests are defined by the Forest Stewardship Council (FSC) as areas of forest or other vegetation types that have particular importance for social or environmental reasons, including: species diversity, contribution to landscape-level mosaics of ecosystems and habitats, critical ecosystem services, community needs and cultural values. We review transactions in high conservation value forest areas in accordance with the requirements for Timber as described above.

2 https://www.iucn.org/theme/protected-areas/about/protected-area-categories
V. Human Rights

Across all our lines of business and in each region of the world in which we operate, JPMorgan Chase supports fundamental principles of human rights. Our respect for the protection and preservation of human rights is guided by the principles set forth in the United Nations Universal Declaration of Human Rights, as outlined in our Human Rights Statement. Further, we acknowledge the Guiding Principles on Business and Human Rights (also known as the Guiding Principles) as the recognized framework for corporations to respect human rights in their own operations and through their business relationships. We are actively engaging with stakeholders, peer financial institutions and others in developing guidance on how to most appropriately apply the Guiding Principles to the financial sector.

JPMorgan Chase believes it is the role of government in each country to protect human rights. We also believe that our client has a role to play in promoting respect for human rights. We have a range of policies, procedures and training that pertain to human rights issues, including modern slavery, across our business and supply chain.

A. Indigenous Peoples

The identities and cultures of Indigenous Peoples are linked to the ancestral lands on which they live and the natural resources (such as fresh water or forest products) on which they depend. These lands and natural resources are often traditionally-owned or under customary use. We recognize that Indigenous Peoples, as social groups with identities that are distinct from mainstream groups in national societies, are often among the most marginalized and vulnerable segments of the population.

For transactions where we can identify that the use of proceeds may have the potential to impact Indigenous Peoples, we expect our clients to demonstrate alignment with the objectives and requirements of IFC Performance Standard 7 on Indigenous Peoples, including with respect to circumstances requiring Free, Prior and Informed Consent. These objectives include:

- Working to maintain the full respect for the human rights, dignity, aspirations, culture and natural resource-based livelihoods of Indigenous Peoples throughout the development process;
- Anticipating and avoiding adverse impacts of projects on communities of Indigenous Peoples, or when avoidance is not possible, to minimize and/or compensate for such impacts;
- Promoting sustainable development benefits and opportunities for Indigenous Peoples in a culturally appropriate manner;
- Establishing and maintaining an ongoing relationship based on informed consultation and participation with the Indigenous Peoples affected by a project throughout the project’s life-cycle;
- Securing the Free, Prior and Informed Consent of the Affected Communities of Indigenous Peoples when the circumstances described in Performance Standard 7 are present; and
- Respecting and preserving the culture, knowledge and practices of Indigenous Peoples.

B. Modern Slavery and Child Labor

We recognize that modern slavery issues, such as forced labor and human trafficking, are a significant global challenge. The global economy has seen marked shifts in the labor migration, and we are mindful of the need to understand where the patterns and practices of labor recruitment present risk to our business.

As outlined in this document, we have a robust E&S Risk Management process that analyzes the potential social impacts of our corporate lending, advisory and capital markets transactions. The process prohibits any transactions where there is evidence of the use of modern slavery or child labor (see Section II. D. Prohibited Transactions). For additional information on our business and operations, see our U.K. Modern Slavery Act Group Statement.
The information provided in this document reflects JPMorgan Chase’s approach to managing E&S risks in certain transactions as at the date of this document and is subject to change without notice. JPMorgan Chase does not undertake to update any of such information in this document.
