

FOSSIL.BANKS NO THANKS

WIEBE DRAIJER, CEO

RABOBANK

UTRECHT

Netherlands

SUBJECT: RABOBANK'S FUTURE RELATIONSHIP WITH THE FOSSIL FUEL INDUSTRY

14 AUGUST 2019

Dear Mr. Draijer,

I am writing to you today on behalf of more than 260 organisations from 48 countries to seek clarity and action from your bank on a matter that is of great concern to us, namely your bank's relationship with the fossil fuel industry.¹ Specifically, we seek to understand whether Rabobank is willing to put in place a concrete strategy in the coming decade to fully disengage from this industry which, as you will be aware, is the principal driver of the worsening climate crisis. We believe that your bank is well placed to take such steps.

We all live in countries that are now impacted in one way or the other by accelerating climate change: affected by heat waves, droughts and water shortages, by excessive rainfall and floods, by cold waves and blizzards, by hurricanes and hail storms, by failing crops and burning forests, by steadily rising sea levels and warming oceans, by the accelerating extinction of plant and animal species, by creeping desertification, by forced migration and other climate related disruptions of community and livelihood, and yes, also by deaths directly linked to a rapidly changing climate.

PREVENTING CLIMATE BREAKDOWN

The Paris Climate Agreement of 2015 aims to limit the global average temperature rise to well below 2°C, aiming for 1.5°C, to prevent the worst impacts of climate change from unfolding. Yet the recent Intergovernmental Panel on Climate Change (IPCC) Special Report makes clear that 2°C of warming is not a safe limit, and we must make all efforts to avoid exceeding the lower limit of 1.5°C stated in the Agreement. That extra half a degree is the difference between widespread human suffering and ecosystem collapse, and a fighting chance of adaptation.² Unless drastic and urgent additional action is taken by state, civil society *and* private sector actors we are inexorably heading towards a 3°C or even 4°C average temperature rise, with catastrophic consequences.

To prevent this scenario from unfolding requires that the root cause of climate change – the continued exploration, extraction, and subsequent burning of coal, oil and gas – is decisively dealt with. To have a reasonable chance of limiting warming to 1.5°C, carbon budgets calculated by the IPCC indicate that less than 570 gigatons of CO₂ can still be released into the atmosphere.³ Further analysis has found that currently operating oil and gas fields and coal mines around the world already contain 940 gigatons of potential CO₂ –

¹ With 'fossil fuel industry' we refer to all coal mining, the exploration and exploitation of oil and gas reserves anywhere in the world, all fossil fuel-based energy production and all infrastructure that exists to bring fossil fuels to market, while acknowledging that not all fossil fuels are used for energy production.

² The Intergovernmental Panel on Climate Change (IPCC), 2018: Special Report, Global Warming of 1.5 °C. (SR1.5)

³ IPCC SR1.5 estimates that the remaining global CO₂ budget for a 66% probability of staying 1.5°C of temperature rise was 570 Gt at the beginning of 2018.

far more than the world can afford to burn.⁴ The conclusions are clear: the expansion of the fossil fuel industry must be brought to an immediate end, and many currently operating facilities must be closed ahead of schedule.

THE ROLE OF RABOBANK

This brings us to the current relationship of Rabobank with the fossil fuel industry.

Fossil fuels appear to make up a relatively small portion of Rabobank's financial portfolio. The Dutch Fair Finance Guide 2018⁵ found that Rabobank had less than USD\$1 billion in loans and investments to the fossil fuels industry in 2017, which is a fraction of Rabobank's total assets according to the bank's 2018 Annual Report. In addition, the bank already has financing exclusions in place across the coal, oil, and gas sectors.

In our view, this makes Rabobank well-positioned to become a climate leader in the financial sector by publicly making the following commitments on fossil fuel finance:

- immediately ending Rabobank's support for all **new fossil fuel projects**, including exploration, extraction, transportation and power;
- publishing a robust plan for phasing out Rabobank's support for **all existing fossil fuel projects and companies in the bank's portfolio**, on a timetable consistent with what is necessary to limit warming to 1.5°C.

No bank with exposure to the fossil fuel industry has yet taken these steps, which are crucially important given that the UN Emissions Gap report from November 2018 warns that the world must increase its efforts *fivefold* to cut emissions or face climate breakdown.⁶ In addition, the International Energy Agency has said that even limiting warming to 2°C means no new fossil fuel infrastructure can be built.⁷

BEING A CLIMATE LEADER

Given the above, we urge Rabobank to make the commitment to exclude finance for all new fossil fuel projects and to commit to an overall phase out of fossil fuel finance. Such a commitment would gain Rabobank public recognition for its stance on climate change – especially in light of intensifying public concern on this most urgent matter – and set it apart from other Dutch banks, while having a low impact on the bank's portfolio. The banking sector has been slow to move on its fossil fuel finance, and Rabobank could significantly help to set the new standard of best practice for genuinely responsible banks.

In particular, we believe that progress by banks like yours towards becoming fossil free can have a significant impact on the banking sector, both at the national level within the Netherlands and globally. The 33 worst bankers of fossil fuels in the world, as exposed by the Banking on Climate Change Report Card 2019,⁸ are coming under increasing pressure from civil society to exit the fossil fuel industry. Those of them that refuse to do the right thing must and will become increasingly isolated as other banks take up the mantle of climate leaders within the financial sector.

With the 25th UN Climate Summit taking place in early December, we urge you to take concrete steps towards ending your bank's fossil fuel finance by that time. With so much at stake for the world, we trust that you will want to side with us in ending the fossil fuel era by terminating your support for the sector in order to avoid breaching the 1.5°C limit.

We look forward to your response to this letter, either to the email address below or in a public statement as described in the demands above.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'Johan Frijns', written over a light blue horizontal line.

Johan Frijns, director BankTrack
