# Bank of America Corporation

NYSE: **BAC**

Bank of America has committed \$20 billion to support the growth of environmentally sustainable business activity to address global climate change. A ten-year initiative, it will encourage development of environmentally sustainable business practices through lending, investing, philanthropy and the creation of new products and services.

The firm has set voluntary targets for the reduction of greenhouse gases (GHGs) in both its own operations and utilities lending portfolio. In July 2007, Bank of America also joined the Chicago and European Climate Exchanges and acquired a minority stake in exchange parent company, Climate Exchange plc, a key step in developing its carbon credit trading platform.

**Summary Score: 56**

## Company Information

Bank of America serves individual consumers, small and middle market businesses and large corporations with a full range of banking, investing, asset management and other financial and risk-management products and services. Many of the bank's services to corporate and institutional clients are provided through its U.S. and U.K. subsidiaries, Banc of America Securities LLC and Banc of America Securities Limited.

## Management Execution

**Score: 13**

*CEO Leadership/ Statements* In March 2007, CEO Ken Lewis gave the mandate that all areas of Bank of America's business would be involved in the firm's \$20 billion climate commitment. Mr. Lewis was quoted in the commitment's press release as saying, "Today, we have a tremendous opportunity to support our customer's efforts to build an environmentally sustainable economy -- through innovative home and office construction, new manufacturing technology, changes in transportation, and new ways to supply our energy."  
In a speech to the Boston Chief Executives' Club in October 2004, Mr. Lewis said, "we are convinced that more efficient and cleaner use of our natural resources will result in healthier people, lower energy costs, lower maintenance costs, greater long-term investment value, and a stronger overall economy in our communities."

*Company Policy* Bank of America's \$20 billion ten-year climate change initiative was announced in March 2007. Details regarding emissions reduction targets and energy efficiency efforts are discussed below. The firm has announced that \$18 billion will be met through financing, advising and creating market capacity to help clients develop and adopt low-carbon technologies, with participation from each of the bank's major lines of business.  
Earlier, in May 2004, Bank of America released a Climate Change Position Paper that states, "As a corporation, Bank of America has the responsibility to address climate change and the service sector has a role in promoting and implementing reductions of greenhouse gas emissions that extends beyond its own operations, including relationships with customers and suppliers."  
Anne Finucane, Chief Marketing Officer and Environmental Council Chair, is also quoted in the paper: "We, at Bank of America, recognize that climate change and atmospheric pollution represent a risk to the ultimate stability and sustainability of our way of life. Bank of America is committed to addressing climate change issues even more so today, when we believe we can set real and achievable targets for greenhouse gas reductions in both our operations as well as investment opportunities."

*Chief Environmental Officer* Anne Finucane, Chief Marketing Officer, Head of Global Corporate Affairs and Chair, Environmental Council.  
Anne Finucane reports directly to the CEO on environmental issues and to the Chief Administrative Officer on all other issues.

*Levels to CEO* 0

# Bank of America Corporation

|   |   |
|---|---|
| <i>Climate Change Executive</i>                 | Climate change is one of the leading initiatives of the firm's Environmental Council, and as such, there are several lines of business and risk management executives that are responsible for climate change initiatives.  |
| <i>Executive Committee</i>                      | <p>The philosophy of Bank of America is that environmental issues be incorporated as a standard business consideration by all business lines and operating areas within the company. As such, the bank has not created one group that has sole responsibility for environmental progress. The Environmental Council with executive representation meets periodically throughout the year and members drive performance within their respective lines of business. The firm's public policy group supports this effort.</p> <p>Below the level of the Environmental Council, there are cross-functional teams that have been developed to address environmental issues and opportunities. These teams focus on areas such as credit risk, reporting and tracking, operations and Supply Chain Management, procurement and corporate services, energy management and associate engagement. As an example, the bank's Energy Team, established by Corporate Workplace, focuses on reducing energy consumption, promoting energy efficiency, implementing the firm's GHG emissions reduction commitment and exploring alternative energy potential.</p> |
| <i>ESG Factors in Risk Management/Financing</i> | As part of its new \$20 billion environmental commitment, Bank of America will give favorable consideration, among other criteria, to clients that are creating and implementing environmentally sustainable products, services and technologies. Additionally, Bank of America's credit, investment and underwriting activities take into consideration more general environmental concerns. Environmental policy guidelines are included in online credit risk manuals. The firm has a detailed Forests Practices policy that applies to all extensions of credit and some bond underwriting, is a signatory to the Equator Principles and uses the World Bank's pollution control and abatement guidelines in project finance. The Environmental Services Department assists business lines in analyzing environmental risk.   |
| <i>Staff Training/Education</i>                 | <p>In 2005, Bank of America conducted expanded environmental credit risk training and aims to train all associates involved in credit decision-making. The firm also maintains a dedicated internal website on environmental training.</p> <p>Bank of America educates employees about commuter choices, has organized a car-pooling database and offers a hybrid vehicle reimbursement program for U.S. employees. The firm has a formal employee awareness campaign, Make It Second Nature, which educates employees on resource/energy conservation and employee engagement opportunities.</p>   |
| <i>External Initiatives</i>                     | <ul style="list-style-type: none"> <li>• Ceres</li> <li>• EPA Climate Leaders</li> <li>• EPA Energy Star</li> <li>• Equator Principles</li> <li>• Nature Conservancy International Leadership Council</li> <li>• Pew Center on Global Climate Change's Business Environmental Leadership Council</li> <li>• UNEP-Finance Initiative</li> </ul>  |
| <i>Investment Research</i>                      | None identified.  |
| <i>Compensation Link</i>                        | None identified.  |

However, Bank of America does recognize the movement towards GHG emissions regulation in the United States. The firm also supports research with the United Nations Environment Program Finance Initiative (UNEP-FI) on potential physical risks posed by climate change to the financial sector.</p> |

# Bank of America Corporation

**Public Policy Statements** Bank of America states in its Climate Change Position Paper that the firm is committed to serving as “an agent of change in elevating the public and private sector’s commitment and approach to addressing climate change.” In an October 2007 speech to the Seattle Chamber of Commerce Regional Leadership Conference in Vancouver, British Columbia, Brian Moynihan, head of Commercial & Investment Banking, stated, “At Bank of America, we believe that the key to reducing carbon emissions and accelerating our economy’s adaptation to a sustainable future is for the United States to implement a cap and trade system to control carbon emissions. We favor a market based mechanism to set a value for carbon allowances. And we favor one clear, federal standard that would give investors the certainty they need to plan for the future.”

The firm’s Investment Strategies Group has also sent a note to clients on the economic transitions posed to industries by climate change and potential legislation. The note states, “Companies that recognize early the eventuality of emissions regulation will likely be best prepared for the widespread change. Their readiness should translate into lessened exposure to rising input costs, greater operating efficiency and productivity and reflect an innovative management body that is skilled at adapting to an ever-changing business environment.”

In addition, in October 2007, Bank of America sent a letter to the California Air Resources Board urging support for the California Climate Action Registry Forest Protocols, a standard for the quantification and reporting of forest carbon stocks in the state of California.

## Emissions Accounting Score: 8

GHG Emissions Inventory **Year:** 2006 **Facility/Region:** United States **Protocol:** GHG Protocol

| Emissions                      | CO <sub>2</sub> e (Metric Tonnes) |                                   |
|--------------------------------|-----------------------------------|-----------------------------------|
| <b>Total Emissions</b>         | <b>1,466,584</b>                  |                                   |
| Scope 1 (Direct)               |                                   |                                   |
| Scope 2 (Indirect—Electricity) | 1,380,000*                        | * Aggregate Scope 1 & 2 emissions |
| Scope 3                        | 86,584**                          | **Global business travel by air   |

| Products                       |                                   |                                   |
| Supply Chain                   |                                   |                                   |

**Accounting Methods** Bank of America defines its organizational boundaries using the Operational Control Approach under the U.S. EPA Climate Leaders program.

**Third Party Certification** A verification component is included in the EPA Climate Leaders GHG Inventory Protocol. Additionally, an inventory review will be completed by Econergy International, contracted to develop Bank of America’s Inventory Management Plan (IMP).

**Certification Year** 2006

**Emissions Savings & Offsets** **2006 % Renewable Energy:** 0% (Proposal bids for renewable energy were sent out in 2005.)  
**Energy Efficiency Savings:** In 2005, Bank of America achieved a 4% reduction in electrical energy consumption in U.S. facilities.

**Certified CO<sub>2</sub> Offsets:** As part of the firm’s Chicago Climate Exchange (CCX) membership, Bank of America has agreed to purchase a minimum of 500,000 tons of offsets over a three-year period.

## Strategic Planning Score: 22

| GHG Emissions Targets    | Reduction Targets | Baseline Year | Target Year | Region                     |
|--------------------------|-------------------|---------------|-------------|----------------------------|
| <b>Total Emissions</b>   | 9%                | 2004          | 2009        | All internal operations    |
| <b>Lending Emissions</b> | 7%                | 2004          | 2008        | Energy & utility portfolio |

**Target Details** Bank of America has set a goal to reduce indirect emissions from the firm’s utilities portfolio by 7% by 2008. To accomplish this goal the firm is changing its portfolio mix to add customers using renewable and low-carbon energy and annually tracking portfolio emission levels.

**Emissions Trading** In July 2007, Bank of America joined the Chicago Climate Exchange (CCX). The firm joined as a full, emissions-reducing member and as a liquidity provider, and plans to begin facilitating trades in the first quarter of 2008. In addition, Bank of America has joined the Chicago Climate Futures Exchange (CCFE) and the European Climate Exchange (ECX). As part of its CCX membership and a 0.5% investment stake in Climate Exchange plc (CLE), Bank of America has committed to:

- Expand its greenhouse gas emission reduction target;
- Provide liquidity on the CCX, ECX and CCFE;
- Join CCX’s Offsets Committee;
- Treat CLE exchanges as preferred providers for exchange traded environmental product execution; and
- Develop and launch later this year CLE-linked offset products and services for retail and institutional customers who wish to reduce their own carbon footprints.

---

# Bank of America Corporation

---

*Renewable Energy* In Investment Banking, the firm assisted in the 2007 IPO of Ocean Power Technologies, a tidal energy company. Bank of America is also acting as a financial advisor to Iberdrola, the Spanish wind power developer, on its proposed acquisition of Energy East. To utilize renewable energy at its own banking centers, the firm's Strategic Investments team is exploring solar and methane options.

In August 2007, Bank of America announced a partnership with San José Unified School District and Chevron Energy Solutions to establish the largest solar power (5 MW) and energy-efficient facilities program in K-12 education in the U.S. Bank of America will own the solar equipment and, through the company's Energy Services Financing Solutions team, sell power to the district at rates significantly below market utility rates. The school district is expected to save \$25 million in energy costs over the life of the system, reducing carbon emissions by more than 37,000 tons.

---

*Energy Efficiency* In 2002, Bank of America established a centralized energy investment pool to invest in energy efficient technologies that will lower energy consumption. Through December 2005, Bank of America had invested \$27 million in efficiency projects with an average payback period of three years. Bank of America has also committed \$1.4 billion to achieve Leadership in Energy and Environmental Design (LEED) certification in all new construction of office facilities and banking centers. The firm's Bank of America Tower, currently under construction in New York City, will be the world's first skyscraper designed to attain LEED Platinum certification. Upon completion in 2008, the \$1 billion project will be the world's most environmentally responsible office building. The firm will also invest \$100 million in energy conservation measures for use in all company facilities.

Also in green building, Bank of America invested more than \$200 million in Low Income Housing Tax Credit equity in projects that meet green criteria between 2004 and 2006.

In September 2007, the Bank of America Charitable Foundation announced a \$1 million grant to the United Nations Foundation to establish a "National Task Force on Energy Efficiency" with Ceres. The task force aims to double the rate of energy efficiency improvement in the U.S. over the next five years. The task force will encourage leadership among the financial and high-tech sectors and work to align incentives to promote investments by utilities.

Bank of America also has in place a flexible workplace program that reduces emissions due to employee commuting and offers a \$3,000 hybrid vehicle reimbursement program for U.S. employees. In addition, since 2000 the firm has reduced internal office paper usage per associate by 42 percent.

---

*Other Climate-Related Investment Products* Bank of America's \$20 billion environmental initiative includes Commercial Real Estate Banking, Corporate & Investment Banking, Carbon Emissions Trading, Environmental Lending Consideration, as well as eco-friendly credit card products, Green Mortgage and Home Equity products and Timberland Investment Solutions. As one example, the firm in November 2007 introduced a credit card that allows customers to earn carbon offset credits through purchases.

Bank of America is also adapting and expanding existing product lines. The firm already offers \$1,000 rebates on mortgages to purchase homes meeting Energy Star specifications. Additionally, in April 2007, Bank of America announced its first environmentally focused product launch – a donation program with Conservation International for new home equity customers. Bank of America will also continue its EPA SmartWay Transport Program to provide Small Business Administration SBA Express loans to trucking companies to finance fuel efficient technologies.

In forestry, the firm is currently evaluating investment management solutions that incorporate forest conservation principles consistent with those defined by the Forest Stewardship Council. Bank of America is considering several solutions from reforestation and wildlife management to responsible development and the support of carbon sequestration ecosystems. The Global Wealth & Investment Management division is pursuing sustainable timber investment products as well. Separately, Bank of America has lent \$65 million to the Redwood Forest Foundation for the purchase of 50,000 acres of forest in Mendocino County, California, which the bank cites as the nation's first forest acquisition by a non-profit using 100% private capital.

Bear Stearns has not addressed climate change as a governance issue. The company declined to comment on this profile by deadline.

In May 2007, Citi announced a \$50 billion commitment over 10 years to address global climate change through increases in investment and the financing of alternative energy and other carbon-emission reduction activities. Citi has announced targets for emissions reductions, energy consumption and renewable electricity procurement. The company also has a detailed environmental and social risk management policy. Citi includes in its emissions inventory aggregate CO<sub>2</sub> emissions from power plant financing based on percentage of debt provided by the bank; this represents new capacity only, including expansions of existing plants.

**Summary Score: 59**

## Company Information

Citi is a financial services company with some 200 million customer accounts in more than 100 countries. Citi is organized into three major business groups - Global Consumer, Markets & Banking, and Global Wealth Management - in addition to one stand-alone business, Citi Alternative Investments.

## Contact Information

## Management Execution

**Score: 17**

*CEO Leadership/ Statements* As part of Citi's climate change commitment announcement in May 2007, former Chairman and CEO Charles Prince said, "The comprehensive program we are announcing today is not a wish-list, but a realistic, achievable plan that serves a critical global need and responds to an emerging investment opportunity... We recognize our responsibility to confront climate change and the importance of identifying and helping implement new solutions for our clients and our businesses."

Additionally, in his introductory letter to Citi's 2006 Citizenship Report, Mr. Prince states, "Climate change and global poverty are not unrelated because climate change will disproportionately impact the poorer people and nations of the world... We have set a target to reduce our own greenhouse gas (GHG) emissions, and we work with our clients to provide innovative solutions as they strive to reduce their own emissions."

*Company Policy* In February 2007, Citi released a Position Statement on Climate Change. The Statement is largely focused on public policy advocacy (discussed below).

*Chief Environmental/ Climate Officer* Pamela Flaherty, Senior Vice President of Corporate Citizenship and President & CEO, Citi Foundation

*Levels to CEO* 0

*Executive Committee* Citi's Environmental Affairs Unit, led by the Director of Corporate Citizenship, consults on environmental policy issues, including climate change. Additionally, 16 senior managers sit on an Environmental & Social Policy Review Committee, which provides advice and oversight. The Environmental Affairs Unit includes Bruce Shlein, Valerie Cook-Smith and Tyler Daluz.

Citi has undertaken a thorough analysis of how the regulatory and physical risks of climate change could impact its own operations. The firm factors potential physical risks into its site selection criteria for new facilities. The Corporate Real Estate Services division is responsible for managing Citi's internal footprint, setting reduction targets and procuring green power. Additionally, in 2006 an Alternative Energy Task Force was created to disseminate information about alternative energy across various business groups. The task force is composed of 27 professionals and is led by Hal Clark, Chairman of Citi's North American Power Group.

Additionally, Citi has recently hired Tracy McKibben as the Managing Director and Head of Environmental Banking Strategy. In this role, McKibben will provide clients with expertise on environmental financing and banking, advise on energy policy and European government affairs and contribute to the development of Citi's business plan on climate change.

| <i>ESG Factors in Risk Management/Financing</i>                             | <p>Citi's Environmental and Social Risk Management (ESRM) Policy guides environmental, social and governance (ESG) analysis of business transactions. Citi's ESRM Unit is responsible for transaction review, internal training and policy implementation. Shawn Miller, ESRM Director, reports to the Citi Markets &amp; Banking Chief Risk Officer.</p> <p>Citi discloses the project size thresholds for ESRM Policy implementation for corporate/government loans, project finance, refinancing, debt placements, equity investments and underwritings. Citi Alternative Investments has also incorporated an ESRM framework into their risk management procedures. A total of 86 project finance transactions received ESRM review and were subject to the Equator Principles in 2006.</p> <p>When Citi is financing power generation activities, the firm incorporates the potential costs and risks of carbon in its analysis. Citi also applies stress tests to the carbon profile of its lending and equity portfolios. Citi follows the Equator Principles in its emerging markets financing, including the quantification of project GHG emissions. In 2006, Citi Markets &amp; Banking adopted a new nuclear policy that requires transactions to be evaluated against external guidelines and independently reviewed in some cases.</p> <p>Additionally, Citi has set a goal to disclose a public version of its ESRM policy in 2007. The firm currently provides advisory services in targeted GHG intensive sectors to help clients analyze carbon exposure and reduction strategies.</p> |
| <i>Staff Training/Education</i>   | <p>As reported in Citi's 2006 Citizenship Report, the company provided environmental and social risk training to 556 staff in 2006. Training sessions were also held in China to raise awareness among Citi Markets &amp; Banking (CMB) staff, and Citi executives held meetings with various Chinese banks to share best practices in environmental responsibility. Citi is also launching in 2007 a web-based learning module to provide all CMB bankers with access to ESRM training.</p> <p>Other employment engagement initiatives in 2006 included energy conservation programs in Asia and London, a "Go Green" campaign in the United Arab Emirates and a company-wide Citi Environmental Awareness Week. Citi has also set several goals for 2007 for expanding employee awareness and ESRM training programs.</p>  |

**Carbon Disclosure Project** **Member:** No **2007 Signatory:** No **CDP5 (2007):** Answered Questionnaire (Public)

**CDP5 Risk Disclosure:** "Citi and our clients would be severely challenged by climatic factors in a world where atmospheric concentrations of carbon rise significantly above 450 ppm [parts per million]; dramatic adaptation of our products and services and in some cases our core business model would be required."

Citi recognizes that the firm is directly affected by GHG regulation through electricity pricing, and also sees the potential for second and third generation regulation to cover Citi's own facilities. Citi also cites clients in the power, oil and gas, cement, metals and mining, manufacturing and transportation sectors as being at risk from increasingly stringent regulation. This could present Citi with both credit and loan/equity portfolio risk. Citi also discloses that its 14,500 facilities, many of which are in coastal areas, are vulnerable to physical risks of climate change. Citi cites sea level rise, extreme weather and water scarcity as key issues, and is using both 5-10 year and 20-year time horizons to examine potential risks.

Finally, Citi also sees climate change presenting general client and commercial risks. The firm's CDP5 response mentions brand valuation, share price, competitive positioning and innovation, and concludes that it is "vital for Citi to facilitate and generate the industries of tomorrow in clean energy."

**Public Policy Statements** Citi's Position Statement on Climate Change draws attention to the role of U.S. regulatory policy. Citi states, "U.S. national action and leadership are critical elements of a global solution because of the size of the U.S. economy and our emissions and because a global solution is highly unlikely without U.S. action. We believe that the United States must act now to create a national climate change policy to avoid the economic, social, and environmental damage that will result if GHG emissions are not reduced." Citi also argues against a patchwork of state regulations "that may cause distortions in the national economy." Instead, Citi recommends that U.S. policy should focus on five key areas: a global approach, early action, recognizing early actors, integrating GHGs into pricing mechanisms and increasing incentives for low-GHG technologies.

\* Renewable energy target for total power purchases

### Emissions Trading

Citi's European Commodities Desk is in the process of rolling out an Environmental Products unit over the course of 2007 that will engage in carbon trading. The trading desk is focused on EU ETS allowances and CDM/JI credits.

### Renewable Energy

Citi partners with an energy services company, Constellation NewEnergy, to procure energy for its own facilities. In 2006, Citi increased its procurement of green power to 52,283 MWh, a 400% increase over 2005 purchases.

Citi Markets & Banking (CMB) plans to invest in and finance over \$31 billion in clean energy and alternative technology over the next 10 years. Recent highlights include:

- Financial advisor for EDP's (Energias de Portugal) acquisition of Horizon Wind Energy in 2006
- Underwriter of Brasil Ecodiesel's US\$177 million IPO in 2006
- Citi's Asset Finance Group financed two major wind projects in the United States in 2005—the 120 MW San Juan Mesa project in New Mexico and the 15 MW Bingham Lake project in Minnesota

Citi also makes private equity investments in renewable energy, energy efficiency and GHG emission reduction credit markets through its Sustainable Development Investing (SDI) unit. SDI is part of Citi Venture Capital International (CVCI), a unit of Citi Alternative Investments. Since the inception of SDI in 2004, Citi has invested or committed approximately \$150 million in related companies. Citi has also pledged a ten-fold increase in its capital commitment in this area over the next 10 years to more than \$2 billion.

In 2006, Citi invested through various funds approximately \$75 million in SDI classified investments in the bio-fuels, solar and clean technology markets. Companies include Permolex International (an ethanol producer), Jiangsu Linyang Solarfun Co. (a solar PV manufacturer), Chrysalix Clean Energy Fund and Sindicatum Carbon Capital (a CDM project developer).

Other new products include a joint marketing agreement between CitiMortgage and Sharp Electronics Corp. to offer financing for household solar electric systems, rolled out in September 2006.

### Energy Efficiency

Citi has set a goal of achieving Leadership in Energy and Environmental Design (LEED) Silver certification for the construction of all new office buildings and operations centers. Many existing facilities are also being evaluated for inclusion in the LEED-Existing Building certification program. Citi also expects to open LEED-certified retail branches in 2008. Citi is also working with the U.S. Green Building Council to define a user-friendly process for corporate assessments of real estate portfolios. Meanwhile, larger facilities in Asia set a target to reduce energy use by 5% in 2006.

Citi is also working on a number of other efficiency programs, including testing a software program to lower the energy use of idle PCs, developing a cradle-to-cradle approach to procurement and deploying multi-functional office equipment to reduce energy consumption. Meanwhile, CitiCapital has an Energy Finance Unit that underwrites facility energy efficiency upgrades for clients. Citi has also pledged \$1 billion to the Clinton Foundation's Climate Initiative to support an Energy Efficiency Building Retrofit Program in partnership with large city governments.

### Other Climate-Related Investment Products

Of Citi's \$50 billion climate change commitment, \$10 billion has been earmarked for activities that the firm has already undertaken to address climate change. This includes efforts to measure and reduce the firm's own environmental footprint, client advisory and policy engagement.

In other areas, Citi Community Development (CCD) is working to include renewable energy tax credit investments and green private equity investments in its portfolio. Citi Property Investors (CPI) intends to commit \$500 million to investments in sustainable building projects over the next 10 years. Finally, in late 2006, Citi was the co-lead underwriter for the inaugural issue of U.S. green bonds. The first issuance of bonds was sold to support a carbon-neutral real estate development in Syracuse, NY.

Franklin Resources has not addressed climate change as a governance issue. The company has issued an environmental policy statement, but it has not directly addressed climate-related issues.

**Summary Score: 1**

NYSE: **GS**

Goldman Sachs' Environmental Policy Framework, established in November 2005, states, "Goldman Sachs believes that a healthy environment is necessary for the well-being of society, our people and our business, and is the foundation for a sustainable and strong economy." The framework espouses the philosophy that capital markets can and should play an important role in creating opportunities to address environmental challenges. The framework was designed to include each of the firm's business lines, and it includes these actions: principal investing in alternative energy and clean technology, emissions trading, investment research and management evaluating Environmental, Social and Governance (ESG) criteria, reducing the firm's own environmental footprint and researching public policy options through the firm's Center for Environmental Markets.

**Summary Score: 53**  
(weighted)

## Company Information

Goldman Sachs is a global investment banking, securities and investment management firm that provides a wide range of services worldwide to corporations, financial institutions, governments and high-net-worth individuals. The firm's three core businesses are Investment Banking, Trading and Principal Investments, and Asset Management and Securities Services.

*CEO Leadership/ Statements* Lloyd C. Blankfein, Chairman and CEO, stated in the 2006 Annual Report letter: "In the last year, we have expanded our trading activities in the carbon emissions market to include trading and investing in project-based emission reduction credits and pricing emission risk, in addition to the trading of carbon credits. Innovative trading in these new markets can be a source of meaningful action to address global climate change."  
 Former CEO and current U.S. Treasury Secretary Henry Paulson was also chairman of The Nature Conservancy, the world's largest environmental group, and a vocal advocate of addressing climate change.

*Company Policy* Goldman Sachs' Environmental Policy Framework is founded on the belief that a healthy environment is necessary not only for the well-being of society but also for Goldman Sachs' people and its business, and embodies the philosophy that capital markets can and should play an important role in addressing today's environmental challenges. The Framework outlines the principles and strategies behind the firm's goal to "help find effective market-based solutions to address climate change, ecosystem degradation and other critical environmental issues" and encompasses how Goldman Sachs will address environmental issues in its own operations and across its business units.

*Chief Environmental/ Climate Officer* Mark Tercek, Managing Director and Head of Environmental Strategy Group and Center for Environmental Markets

*Levels to CEO* 0

# The Goldman Sachs Group, Inc.

**Executive Committee** The Environmental Strategy Group is responsible for overseeing implementation of the Environmental Policy Framework, as well as coordinating the firm's global environmental initiatives. The group provides guidance to various businesses about environmental issues, develops training and resources on these topics and engages with a variety of stakeholders to inform and strengthen Goldman Sachs' environmental platform.

In addition to the Environmental Strategy Group, business area heads oversee investment, capital markets advisory and other business activities in environmental markets. Certain business areas also have dedicated teams looking at market making, investment and product opportunities related to the environment.

The Environmental Strategy Group also manages the Center for Environmental Markets (CEM), which was established in 2005 to sponsor independent research and programs with non-governmental and academic partners. Research grants explore effective public policy options for market-based solutions to environmental challenges. The CEM has made grants of \$2.3 million, with 2006 grants awarded to:

- Resources for the Future (RFF): a partnership with RFF's Climate and Technology Program, to fund, among other things, the U.S. Climate Policy Forum, a dialogue among RFF researchers and business leaders from 23 companies across the spectrum of the U.S. economy to analyze domestic policies to address climate change.
- World Resources Institute (WRI): a two-year project to analyze various technology options to reduce greenhouse gas (GHG) emissions and diversify the world's energy sources;
- Woods Hole Research Center (WHRC): a three-year project to examine how to value forest ecosystems and analyze economic alternatives to cutting valuable rainforests.

CEM also disseminates the research and finding of its grants through publications, conferences and targeted outreach to engage and educate clients, investors and policy makers. Examples of outreach programs include:

**Conferences**

- Conference on "Energy, Environment, and the Financial Markets: The Global Opportunity" in March 2007 in London, UK;
- Conference on "The Business of Climate Change: Risks and Opportunities" in April 2007 in New York, NY; and
- Alternative Energy Symposium for the U.S. Senate Finance Committee in October 2007 in Washington, DC.

**Publications**

- In April 2007, World Resources Institute released a report entitled *Scaling Up: Global Technology Deployment to Stabilize Emissions*. The paper presents an overview, using the wedges framework, on how technology, investment and policy interact. It is intended to engage actors in the policy and investment communities on clean technology deployment worldwide.
- In November 2007, RFF released *Assessing U.S. Climate Policy Options*, a report summarizing work at RFF as part of the inter-industry U.S. Climate Policy Forum. The report is intended to provide policy options and criteria for policy assessment from which effective federal policy might be crafted.

**ESG Factors in Risk Management/Financing** Goldman Sachs' investment banking and principal investing areas work with clients to develop business strategies that mitigate environmental risks and take advantage of environmental opportunities. The firm incorporates the environmental and social impacts and practices of its clients into its business selection decisions, and has developed specific environmental and social due diligence guidance for transactions in environmentally sensitive sectors. Finally, Goldman Sachs also follows the Equator Principle guidelines as they apply to its businesses.

Goldman Sachs' Environmental Policy Framework indicates that the firm will encourage clients conducting activity in environmentally sensitive areas to do so with the appropriate safeguards and that the firm believes it is in the interest of its issuer clients to make appropriate disclosure with respect to the environmental impacts of their businesses, including GHG emissions and regulatory factors. Goldman Sachs says it will strongly encourage clients to further develop such disclosure.

The firm also acts as a resource to help clients improve their environmental practices, understand the risks and opportunities associated with environmental issues and integrate these into their core business strategies.

**Staff Training/Education** Staff training has been carried out in the following areas:

- Global due diligence training for investment banking, merchant banking and principal investing teams with respect to the Environmental Policy Framework as well as environmental and social advisory and due diligence work
- Working with teams in investment banking, merchant banking and principal investing to evaluate the environmental and social impacts of transactions
- Worldwide training for the Corporate Services and Real Estate team on green building standards
- Creating environmental consciousness committees in certain offices

# The Goldman Sachs Group, Inc.

**Securities Filings Statement** Although Goldman Sachs has sold off most of its share in power plant operator Cogentrix, the firm's 2006 10-K Form stated, "Our power generation facilities are subject to extensive and evolving federal, state and local energy, environmental and other governmental laws and regulations...In addition, we may incur substantial costs in complying with current or future laws and regulations relating to power generation, including having to commit significant capital toward environmental monitoring, installation of pollution control equipment, payment of emission fees, and application for, and holding of, permits and licenses at our power generation facilities."

**Sustainability Report** Goldman Sachs has not published a sustainability report. However, the Environmental Strategy Group released the 2006 Environmental Policy Year-End Report, and will continue to report updates on an annual basis.

**Carbon Disclosure Project** **Member:** No **2007 Signatory:** Yes **CDP5 (2007):** Answered Questionnaire (Not Public)

**Public Policy Statements** Goldman Sachs' Environmental Policy Framework suggests that climate change "requires the urgent attention of and action by governments, business, consumers and civil society." The firm believes that governments can establish a strong policy framework that creates long-term value for GHG emissions reductions and supports and incentivizes the development of new technologies. The private sector can then take the lead in further developing these markets, establishing better price transparency, creating incentives for innovation and finding cost-effective alternatives. The Policy Framework further indicates the principles which should guide public policy development, including:

- Policies and actions should be based firmly on science and rational economics.
- Policy frameworks should be based on market-based mechanisms to set clear, transparent and consistent price signals.
- Voluntary action alone cannot solve the climate change problem.
- Policies should encourage conservation and efficient use of energy as an important part of a comprehensive solution.
- Solutions must be global in scope.
- Climate change should be viewed in conjunction with other major challenges, e.g., conservation of ecosystems, access to water, poverty alleviation and economic growth.
- Implementation requires an integrated approach to identify where there is the greatest leverage to help mitigate potential problems.

\* 98 occupied core office facilities.

**Accounting Methods** Goldman Sachs tracks emissions from all firm-occupied office facilities and data centers, as well as the offices of wholly owned subsidiaries.

**Third Party Certification** The 2005 baseline report was verified by Viridian Energy & Environmental, LLC (formally Steven Winter Associates).

**Certification Year** 2005

**Emissions Savings & Offsets** **2006 % Renewable Energy:** The firm purchased renewable energy in its London and Frankfurt offices.

**Energy Efficiency Savings:** None calculated

**Certified CO<sub>2</sub> Offsets:** None identified.

## Strategic Planning

**Score: 17**

| GHG Emissions Targets | Reduction Targets | Baseline Year | Target Year | Region                 |
|-----------------------|-------------------|---------------|-------------|------------------------|
| <b>Energy Use</b>     | 7%                | 2005          | 2012        | Leased & owned offices |

**Emissions Trading** Goldman Sachs has been engaged in the carbon emissions market since January 2005. Focus has been on the EU-ETS, and emission price risk has become integrated into the liability hedging concerns of corporate clients. Goldman Sachs is also involved in originating projects, purchasing forward credit streams and marketing credits to its client base.

In September 2006, Goldman Sachs made a minority equity investment in Climate Exchange plc, which owns the U.S. and European trading platforms, Chicago Climate Exchange (CCX) and European Climate Exchange (ECX), as well as the newly created California Climate Exchange (CaCX).

---

# The Goldman Sachs Group, Inc.

---

*Renewable Energy* Goldman Sachs has made significant investments in renewable energy technologies through its Principal Investments division, totaling more than \$2 billion. Some of the sectors and companies invested in include:

- *Cellulosic Ethanol*: Iogen built and operates the world's only functioning demonstration-scale plant to convert biomass to cellulose ethanol using enzyme technology.
- *Wind*: Horizon Wind Energy is one of the largest wind farm developers/owners in the U.S. (In March 2007, Energias de Portugal SA agreed to acquire Horizon Wind Energy.)
- *Solar PV Integration*: SunEdison is one of the largest solar photovoltaic installer/integrators in the U.S.
- *Solar PV Manufacturing*: First Solar manufactures "thin film" PV panels and has created a proprietary Cadmium Telluride (CdTe) PV module technology.
- *Wind Turbine Manufacturing*: Nordex and Nordic Windpower are leaders in multi-MW turbine technology.
- *Waste Recycling*: Beijing Goldenway Bio-tech builds and operates recycling stations that turn biowaste into protein-rich feed or fertilizer additives. The company is one of the leading developers in micro organism use for agriculture in China.

---

*Energy Efficiency* Goldman Sachs has been a leader in developing green building standards for its buildings. The firm has developed uniform green building standards for use in the construction and major renovation of its facilities. The standards are designed to ensure that the firm meets the intent of Leadership in Energy and Environmental Design (LEED) Gold certification or other whole building standards on all future projects, and the global real estate team has been trained on implementing the standards. The firm already has a LEED certified building in Jersey City, New Jersey and is working towards LEED Gold certification for its new world headquarters in New York, scheduled to be completed in 2009. In addition, the renovation a Chicago building achieved LEED CI (commercial interiors) pilot certification. Following the completion of the firm's New York building, Goldman Sachs will be the largest owner of LEED-certified commercial office buildings in the world.

Additionally, Goldman Sachs has increased the use of recycled and environmentally certified products and used more energy efficient equipment. The firm has also developed environmentally sound procurement practices and incorporated environmental criteria into its supplier selection and review processes.

Investments in energy efficiency companies include:

- *Load Shifting*: Ice Energy produces commercial and residential thermal storage units to shift energy consumption from peak to off-peak periods.
- *Electricity Transmission and Usage*: Optimal Technologies develops solutions to help utilities, businesses and consumers optimize their energy usage and minimize losses.

Finally, in August 2007 GS Real Estate Partners, within the Merchant Banking Division, made an \$80 million commitment to the Bond Companies Sustainability Fund. Through the Sustainability Fund, Goldman Sachs and Bond will invest in the development and repositioning of urban infill properties using sustainable building technology and management practices. The Bond Companies have also created a strategic partnership with The Abraham Group. The Abraham Group is headed by Former U.S. Secretary of Energy and Senator from the State of Michigan, Spencer Abraham.

---

*Other Climate-Related Investment Products* In May 2007, Goldman Sachs created the first catastrophe collateralized debt obligation (CDO). The CDO provides a new opportunity for the capital markets to invest in diversifying risks and a new source of capital for the firm's insurance and reinsurance clients.

In December 2006, Goldman Sachs' investment management division launched a Socially Responsible Large Cap Strategy fund.

During 2006 and 2007, Goldman Sachs, together with the Goldman Sachs Charitable Fund (GSCF), continued its efforts to establish a nature reserve for the benefit of the people of Chile, in the region of Tierra del Fuego. This initiative began in February 2002, when Goldman Sachs acquired defaulted debt, which was collateralized by 640,000 acres of relatively pristine forest, now known as Karukinka, in Tierra del Fuego. In September 2004, Goldman Sachs announced that the property, along with significant financial resources, was being transferred to the Wildlife Conservation Society (WCS), the international conservation organization based in New York City. Working in partnership, Goldman Sachs, GSCF and WCS established the three-year WCS-GS Alliance.

JPMorgan Chase & Co. says it seeks to “assume a leadership role in the financial services industry by helping to reduce greenhouse gases (GHGs),” and has committed to advocate for a market-based national policy on greenhouse gas controls. JPMorgan has also acknowledged that consideration of environmental issues such as climate change is “fundamental to risk management.” The company has a climate governance structure that is led by an Office of Environmental Affairs and guided by an executive-level Environment Oversight Committee. Climate change policy is also overseen by members of the company’s Executive Committee and the Public Responsibility Committee of the Board of Directors. In addition, JPMorgan has incorporated climate change into its investment research division.

**Summary Score: 43**

## Company Information

With assets of \$1.5 trillion, JPMorgan Chase & Co. is the third largest financial services firm in the United States. The company offers a range of services, including investment banking, financial services for consumers, small business and commercial banking, financial transaction processing, asset management and private equity.

## Board Oversight

**Score: 5**

*Board Committee: Environmental Oversight* Public Responsibility Committee  
*Committee Chair* William H. Gray, III, Chairman, Amani Group  
*Board Member: Climate Change* None identified.  
*Board Review* JPMorgan Chase’s Public Responsibility Committee “reviews and considers the Firm’s position and practices on charitable contributions, community development, legislation, protection of the environment, shareholder proposals involving issues of public interest and public responsibility and other similar issues as to which JPMorgan Chase relates to the community at large, and provides guidance to management and the Board as appropriate.” The committee also oversees the company’s Office of Environmental Affairs. The Risk Policy Committee is responsible for oversight of the CEO’s and senior management’s responsibilities for assessing the firm’s risk, which includes reputational risk.  
*Board Training* None identified.

## Management Execution

**Score: 13**

*CEO Leadership/ Statements* In his 2007 annual letter to shareholders, Chairman and CEO James Dimon outlines important steps taken by the company to address climate change risks and opportunities, including publishing a series of corporate research reports concerning business and environmental linkages, completing the company’s U.S. GHG emissions baseline, raising \$1.5 billion of equity for the wind power market, and increasing investments in energy-efficient projects. Mr. Dimon also listed future steps to “continue the momentum.” Such steps include an expanded effort to provide clients with products and services that help them to reduce their GHG emissions, increased investments in energy-efficiency projects, and a stronger team to “better manage the environmental and social risks within our deal flow.” Dimon also stated: “We are continuing to advance public policy debate on the environmental effectiveness and economic efficiency of greenhouse gas emission reductions.”  
*Company Policy* In April 2005, JPMorgan Chase announced its comprehensive environmental policy. The policy is implemented through the company’s Environmental Management System, which includes planning, training, implementation, measurement, reporting, and review. The policy includes a thorough discussion of climate change, including JPMorgan Chase’s intentions to “assume a leadership role in the financial services industry by helping to reduce greenhouse gases in [the company’s] value chain and internally.” The environment statement also acknowledges that consideration of environmental and social issues is “fundamental to risk management and the protection of investors” and outlines climate change-related risk management policies for its investment and commercial banks. The policy outlines a variety of other climate-specific initiatives, including carbon reporting, research, and renewable energy investment.  
*Chief Environmental/ Climate Officer* Amy Davidsen, Office of Environmental Affairs  
 Ms. Davidsen is the Director of the Office of Environmental Affairs and is responsible for establishing global policies and procedures regarding environmental issues, including climate change. She works with Bill Winters, Co-head of the Investment Bank, on climate change business opportunities and initiatives for the firm. Ms. Davidsen reports to Rick Lazio, an Executive Committee member and head of the Global Government Relations and Public Policy group.  
*Levels to CEO* Not determined.

# JPMorgan Chase & Co.

|   |  |
|---|--|
| <i>Executive Committee</i>                      | As discussed, JPMorgan Chase established an Office of Environmental Affairs in 2004 to increase company focus on the environment. The Office is responsible for development and implementation of JPMorgan Chase's environmental policy and initiatives. In addition, an Environmental Oversight Committee, made up of key business leaders, is responsible for guiding the Office's initiatives.  |
| <i>ESG Factors in Risk Management/Financing</i> | <p>JPMorgan's environmental policy states that the company "recognizes that balancing non-financial factors such as environmental and social issues with financial priorities is an essential part of good corporate citizenship, in addition to being fundamental to risk management and the protection of investors...We will integrate environmental and social awareness into the credit analysis and financing decision process, and incorporate it, where appropriate, as part of our due diligence review." JPMorgan Chase relies on the Equator Principles to serve as a framework for determining, assessing, and managing environmental and social risk in project financing; the company commits to apply the Principles to "all loans, debt, and equity underwriting, financial advisories and project-linked derivative transactions where the use of proceeds is designated for potentially damaging projects." In addition, the company's private equity divisions conduct an environmental review as part of their investment decision process for direct investments in companies in environmentally sensitive industries.</p> <p>In project transactions in the power sector, JPMorgan Chase committed in 2005 to quantify the financial cost of GHG emissions and integrate them into financial analysis of the transaction. Beyond a commitment to research the financial implications of higher costs of carbon emission to the electric power industry, the company has also stated its plans to form a coalition to explore financing the greenhouse gas mitigation of coal-fired generating capacity.</p> <p>In 2005, JPMorgan said that it would add carbon disclosure and mitigation to its client review process by the end of the year. The company also stated that it would encourage clients that are large greenhouse gas emitters to develop carbon mitigation plans. To date, JPMorgan has not provided further information on the implementations of these plans.</p> |
| <i>Staff Training/Education</i>                 | JPMorgan Chase has committed to training "relevant employees to take responsibility for and implement" environmental policies and initiatives. In 2006, the company trained more than 100 bankers globally to better implement the environmental and social risk policy.   |
| <i>External Initiatives</i>                     | <ul style="list-style-type: none"> <li>• The Climate Group</li> <li>• Clinton Foundation's Energy Efficiency Building Retrofit Program</li> <li>• EPA Energy Star Partners</li> <li>• Equator Principles</li> <li>• Extractive Industries Transparency Initiative</li> <li>• International Emissions Trading Association</li> <li>• The London Accord</li> <li>• UNEP-Finance Initiative</li> <li>• World Resources Institute Corporate Council</li> </ul>   |
| <i>Investment Research</i>                      | JPMorgan's Global Investment research team includes a climate change focus area, devoted to exploring the business risks and opportunities related to climate change. Climate change investment research looks across sectors and asset classes to examine topics such as potential liabilities of carbon emissions, developments in sustainable and clean fuels, carbon capture, and cap and trading schemes. In particular, research analysts concentrate on macro-economic, legislative and business developments and company valuations in light of current and proposed carbon operating constraints.   |

# JPMorgan Chase & Co.

*Carbon Disclosure Project* **Member:** No **2007 Signatory:** No **CDP5 (2007):** Answered Questionnaire (Public)

**CDP5 Risk Disclosure:** JPMorgan Chase acknowledged various regulatory, physical, and other climate change-related commercial risks facing the company. The company noted that commercial buildings are “likely to face energy efficiency requirements” as part of city or state climate mitigation goals. In addition, JPMorgan Chase acknowledged that the future cost of carbon emissions poses potential economic risks for its clients. Regarding physical risks, JPMorgan pointed to Hurricane Katrina’s impact on the company’s business operations in New Orleans as an example of the possibility of extreme weather events disrupting the company’s operations at its office locations.

*Public Policy Statements* JP Morgan’s Environmental Policy commits the company to facilitating public discourse on climate change national policy. The policy states:

“JPMorgan Chase will arrange meetings with other financial institutions to advocate for reductions of greenhouse gas emissions. We will work with these peers, the electric utility industry, climate policy experts in NGOs and academia, states, and the U.S. government... This dialogue will focus on specific projects to alter the emission trajectory of the U.S. economy. The projects will include...a policy dialogue to advocate that the U.S. government adopt a market-based national policy on greenhouse gas emissions, which includes all sources of emissions and is fair. Options include either a cap-and-trade or tax policy to reduce greenhouse gas emissions at the lowest possible cost.”

In his 2006 annual letter to shareholders, CEO James Dimon includes “continuing to advance the public policy debate” on climate change-related issues as a company priority for 2007.

## Emissions Accounting

**Score: 1**

*GHG Emissions Inventory* JPMorgan Chase has not yet completed an emissions inventory for public disclosure. The company plans to make emissions data available on its website this year and to continue reporting annually.

*Emissions Savings & Offsets* **2006 % Renewable Energy:** 95,000 MWh (wind energy)  
**Energy Efficiency Savings:** None calculated.  
**Offsets:** None identified.

## Strategic Planning

**Score: 18**

### GHG Emissions Targets

|                        | Reduction Targets | Baseline Year | Target Year | Region                  |
|------------------------|-------------------|---------------|-------------|-------------------------|
| <b>Total Emissions</b> | 7%                | 2005          | 2012        | All internal operations |

*Emissions Trading* JPMorgan is preparing to participate in the carbon markets in the European Union and in the United States. The company is among the leaders with respect to secondary market transactions in the E.U. Activities include:

- A suite of EUA monetization products
- CER/EUA Swaps
- JPMorgan CDM/CER and Potential VER activities (including client-focused partnerships on CDM technology, CER origination, CER distribution, and CER commercializing)

JPMorgan is also a liquidity provider for the Chicago Climate Exchange. In addition, JPMorgan announced in December 2007 that the firm will be a founding partner with NYMEX, along with seven other firms, in the formation of the Green Exchange. This new exchange, set to launch in early 2008, will offer a range of environmental futures, options and swap contracts for climate change-focused markets.

*Renewable Energy* In 2006, JPMorgan Chase raised \$1.5 billion of equity for the wind power market, and its own portfolio of investments in renewable energy totals \$1 billion. JPMorgan’s wind portfolio includes 26 wind farms in 13 states, covering 2,035 megawatts of installed capacity and providing enough energy to power approximately 600,000 homes. In addition, the company is seeking to form a coalition to explore financing the GHG mitigation of coal-fired generating capacity. In 2006, JPMorgan chase purchased 95,000 MWh of wind energy to help meet the company’s own energy needs.

*Energy Efficiency* JPMorgan Chase plans to achieve emissions reduction targets through energy efficiency projects, purchase of RECs, and reduction of energy consumption through employee awareness. In addition, the company began building several green bank branches and is seeking LEED certification for the renovation of its world headquarters. JPMorgan Chase is also a founding partner in the Clinton Foundation’s Climate Initiative (CCI) Energy Building Retrofit Program, which aims to provide innovative financing solutions for city governments addressing building energy efficiency. The company has committed to arranging \$1 billion to finance cities and private building owners to undertake retrofits at no net cost.

*Other Climate-Related Investment Products* JPMorgan Chase “seeks to develop for clients new financial products to promote emissions reductions.” In its mortgage loans products, JPMorgan plans to accommodate higher debt to income ratios for homes that are considered energy efficient. In addition, the firm will continue to seek investments in low-income “green” housing that conserves energy and natural resources, promotes health, and provides easy access to jobs, schools, and services. In 2007 JPMorgan launched the JPMorgan Environmental Index-Carbon BETA (JENI-Carbon Beta), the first high-grade corporate bond index designed to address the risks of climate change. A collaboration between JPMorgan and Innovest Strategic Investment Advisors, JENI-Carbon Beta is designed to enable credit investors to make return-driven investment decisions that systematically take the risks and opportunities created by climate change into account.

Legg Mason has not addressed climate change as a governance issue.

*Board Role* Lehman Brothers is currently considering the board's role in oversight of environmental and climate change issues.  
*Board Training* Board training on climate change issues is also under consideration.

## Management Execution

**Score: 11**

*CEO Leadership/ Statements* In the February 2007 press release to announce the establishment of Lehman Brothers' Global Council on Climate Change, Chairman Fuld said, "Prudent risk management dictates that this is an area where we cannot afford to be wrong. We must always leave ourselves options. By harnessing our global resources and gathering insights from our clients around the world, we are in a unique position to bring the best thinking together to address this issue. We will facilitate constructive dialogue."  
 Managing Director Theodore Roosevelt IV, who leads the firm's climate change strategy as chairman of its Global Council on Climate Change, stated in a September 2007 Euromoney article, "The economic transformation driven by climate change, we believe, will be more profound and deeper than globalization, as energy is so fundamental to economic growth."

*Company Policy* The development of an environmental policy is underway. Executive Committee members recently appointed a Global Head of Sustainability who is charged with the development of appropriate processes, policies and strategies for the firm.

*Chief Environmental Officer* Charlotte Grezo, Managing Director, Global Head of Sustainability and President of the Global Council on Climate Change

*Levels to CEO* 2

*Climate Change Executive* Theodore Roosevelt IV, Managing Director and Chair, Global Council on Climate Change

*Executive Committee* As noted above, Lehman Brothers launched the Global Council on Climate Change in February 2007, chaired by Mr. Roosevelt, who has been at Lehman Brothers for 35 years. Roosevelt is also chair of the Pew Center for Global Climate Change and co-chair of the Alliance for Climate Protection. The Global Council on Climate Change will host events to convene thought leaders and key stakeholders to accelerate understanding of climate change issues. Events are planned in New York in December 2007, London in January 2008, and Tokyo in March 2008.

*ESG Factors in Risk Management/ Financing* Analysis of environmental liability is embedded in the firm's due diligence processes for underwriting and other transactions. Potential transactions are screened by independent committees, which comprise senior members from various corporate divisions, including members of the Global Risk Management Division.

*Staff Training/Education* Lehman Brothers conducts internal communications campaigns on the environment, including information on the firm's initiatives within its facilities. An intranet site "green@lehman" is about to be launched.

# Lehman Brothers Holdings Inc.

---

*Renewable Energy* Lehman Brothers has been involved in debt and equity financing, IPOs, private equity investments and M&A transactions for the renewable energy sector.

To address its own emissions, Lehman Brothers' European headquarters in London changed to a green electricity supply in October 2006. The switch will eliminate 28,000 tons of power-related carbon emissions per year, starting in 2007, offsetting all facility emissions from electricity usage.

---

*Energy Efficiency* Lehman Brothers facilities are pursuing the following strategies:

- Utilizing efficient products (i.e., hardware and workstations) and investing in energy efficient equipment
- Optimizing design features (i.e., motion sensors, after hours lighting program, reduced air conditioning hours)
- Recycling programs
- An awareness campaign aimed at changing staff behaviour, including participation in London Energy Awareness week
- Selecting environmentally conscious vendors and products

In addition, Lehman Brothers has been awarded Energy Efficiency Accreditation (EEAS) from the Carbon Trust for the firm's global headquarters in New York and European headquarters in London.

---

*Other Climate-Related Investment Products* Neuberger Berman, a Lehman Brothers company, manages a Socially Responsive Equity Fund (NBSRX). While the Fund's overall strategy tracks corporate citizenship, the Fund managers do assess potential climate change exposure via analysis of companies' climate change strategies and disclosure levels.

Merrill Lynch is a founding member of the Carbon Disclosure Project (CDP) and is the primary sponsor of the CDP's expansion of its annual survey to the S&P 500 in 2006. The firm announced an Environmental Sustainability Framework in September 2007, which covers climate change strategies and advocates for market-based and regulatory solutions. The firm recently launched a number of climate change-related stock indices, and has committed to voluntarily offset all greenhouse gas (GHG) emissions related to electricity consumption, heat usage and commercial travel through 2009.

**Summary Score: 52**  
(weighted)

## Company Information

Merrill Lynch is a wealth management, capital markets and advisory company offering a broad range of services to private clients, small businesses, institutions and corporations. The firm's activities are organized into two interrelated business segments – the Global Markets & Investment Banking Group and Global Wealth Management, which is comprised of Global Private Client and Global Investment Management.

*Board Committee: Climate Change* None identified.

*Board Member: Climate Change* None identified.

*Board Role* The Public Policy & Responsibility Committee oversees the firm's environmental policies. It regularly considers presentations on the firm's environmental sustainability practices by executive management.

*Board Training* None identified.

## Management Execution

**Score: 15**

*CEO Leadership/ Statements* President and Chief Operating Officer Greg Fleming addressed Merrill Lynch employees in September 2007 on the launch of the firm's Environmental Sustainability Framework.

In a September 2007 Euromoney article, Mr. Fleming was quoted as saying, "we make the environmental impact part of our due diligence process, and try to shape the financing to have as positive an effect on the environment as possible."

*Company Policy* The firm's Environmental Sustainability Framework advocates for market-based solutions to environmental challenges, such as climate change. Merrill Lynch sees its role as an "essential partner" to clients, a position from which the firm can influence multiple industries and leverage its quantitative and analytical expertise. The Framework outlines the firm's policies on carbon trading, sustainable finance, environmental footprint management and renewable energy finance.

*Chief Environmental Officer* Merrill Lynch's Environmental Sustainability Steering Committee is chaired by Vice Chairman Harold Ford and is comprised of business heads from throughout the firm.

*Levels to CEO* 0

*Climate Change Executive* Abyd Karmali, Managing Director, Global Head of Carbon Emissions

*Executive Committee* In addition to the Environmental Sustainability Steering Committee, Merrill Lynch has established a Working Committee that reports to the Steering Committee and manages the Firm's environmental framework.

Merrill Lynch's Global Corporate Services Department is charged with monitoring and measuring environmental issues in the workplace and implementing energy efficient strategies designed to reduce the firm's carbon footprint. A newly appointed Head of Environmental Sustainability and Stewardship coordinates these activities.

*ESG Factors in Risk Management/ Financing* Merrill Lynch says it considers environmental factors as part of its due diligence procedures. The firm uses the Equator Principles as a guideline to educate and advocate for sustainable business practices for clients. In addition, Merrill Lynch has a forestry policy, as well as a policy on coal-fired electricity generation financing. The firm recognizes that the GHG emissions associated with coal have become a significant environmental concern and that incentives are required to commercialize a cost-effective technological solution to coal emissions. The firm says it prefers to "finance electrical generation when the producer is a recipient of effective initiatives to reduce GHG and other pollutants, subject to the current state-of-the-art, including energy conservation." Where the producer has not received such incentives, Merrill Lynch will advocate best practices.

# Merrill Lynch & Co., Inc.

**Accounting Methods** Conversions of energy usage for heating, cooling and power were calculated using UNEP Guidelines for Calculating GHG Emissions for Businesses and Non Commercial Organizations. The firm is currently beta testing emission reduction methodology in its data centers.

**Third Party Certification** Merrill Lynch worked with an unnamed third party to verify the emissions that the firm voluntarily offsets.

**Certification Year** 2006

**Emissions Savings & Offsets** **2006 % Renewable Energy:** 0%  
**Energy Efficiency Savings:** Initiatives at the firm's Tokyo operations will annually save nearly 1,000 tons CO2.

**Certified CO<sub>2</sub> Offsets:** Merrill Lynch has voluntarily offset GHG emissions related to electricity consumption, heat usage and commercial travel for the next three years.

**Emissions Trading** Merrill Lynch has been an active participant in the EU-ETS since May 2005. The firm is also involved in the weather risk management industry. Merrill Lynch has provided debt financing for emissions reductions projects, such as repairing gas distribution pipelines.

In addition, Merrill Lynch announced in December 2007 that the firm will be a founding partner with NYMEX, along with seven other firms, in the formation of the Green Exchange. This new exchange, set to launch in early 2008, will offer a range of environmental futures, options and swap contracts for climate change-focused markets.

**Renewable Energy** Merrill Lynch has made private equity investments in alternative energy and clean technology companies, including:

- A minority equity stake in the Russian Carbon Fund, a Copenhagen-based company that invests in clean energy projects
- A \$35 million principle investment in Vulcan Power Company, which will develop prime geothermal property with potential to generate 900-2,000 MW of natural steam fuel
- A \$55 million investment in wind electric generators producer Vestas RRB, which will use the funds for the company's manufacturing facility in Chennai, India

Merrill Lynch also facilitates financing for renewable energy ventures and hosts an annual Renewable Energy Conference to educate institutional investors about opportunities in this sector.

**Energy Efficiency** Merrill Lynch has instituted energy and water conservation programs, temperature and lighting management systems, mass transit incentives and various recycling programs. The firm also announced in its September 2007 Environmental Sustainability Framework that it will design future proprietary office centers to adhere to a minimum Leadership in Energy and Environmental Design (LEED) Gold certification.

**Other Climate-Related Investment Products** In January 2007, Merrill Lynch launched the ML Renewable Energy Index to provide exposure to stocks that are well positioned to benefit from themes of alternative and renewable energy. In July 2007, the firm launched a new Energy Efficiency Index, comprised of 40 companies in the automotive, capital goods, semiconductor and building materials sectors.

In October 2007, Merrill Lynch launched both the ML Carbon Leaders Europe Index, offering exposure to low carbon footprint stocks, and two biofuels indices. The MLCX Biofuels Index offers exposure to biofuels, while the MLCX Biofuels Plus Index covers biofuels as well as conventional fossil fuels. The indices overweight crops that are the most energy efficient in production, including sugar and soybeans.

Merrill Lynch is also one of the lead arrangers, along with Dresdner Kleinwort and UniCredit Markets & Investment Banking, for the European Investment Bank's (EIB) issue of a new EUR bond focused on climate protection, the "Climate Awareness Bond." Funds raised are to be earmarked for EIB lending projects in renewable energy and energy efficiency. Investors will also have the option to use part of their return to buy and cancel CO<sub>2</sub> EU allowances in the EU-ETS market.

Morgan Stanley has committed about \$300 million over the next five years to investments in clean energy projects that can be used to generate emissions credits; the firm has also committed about \$2.7 billion towards the purchase of carbon credits. In August 2007, Morgan Stanley announced that it will partner with Det Norske Veritas (DNV) to offer integrated carbon verification and offsetting services for clients; the firm itself plans to go carbon neutral in 2008. In addition, Morgan Stanley is making significant investments in clean energy technologies.

*CEO Leadership/ Statements* Vice Chairman Jeff Holzschuh, who also co-chairs the firm's Environmental Committee, has said "Morgan Stanley's commitment to the environment is evidenced by our Environmental Policy Statement. We have an ongoing commitment to do business in an environmentally responsible way."  
*Company Policy* Morgan Stanley's updated 2007 Environmental Policy Statement states, "Morgan Stanley recognizes that the climate is changing and that emissions from human activity are one of the leading factors requiring immediate attention."  
 Specifically, Morgan Stanley is committed to:
 

- Helping clients in greenhouse gas intensive industries to develop financial strategies for responding to emerging regulatory mandates;
- Devoting resources towards sustainable and renewable sources of energy;
- Continuing to provide investment research that enhances understanding of the impact of climate change or carbon constraints on businesses;
- Encouraging clients to evaluate the issue of greenhouse gas emissions and to consider investing in and taking advantage of emerging environmental technologies; and
- Enhancing the dialogue regarding strategic public policy solutions to climate change.

*Chief Environmental/ Climate Officer* Jim Butcher, Director, Office of the Environment  
*Levels to CEO* 1  
*Executive Committee* Morgan Stanley has had a 15-member company-wide Environmental Committee since 2002. As part of updating the firm's environmental policy in 2007, Morgan Stanley also created a new Office of the Environment to coordinate internal, external and client efforts. This new Office reports to Chief Administrative Officer Thomas Nides and Vice Chairman Jeff Holzschuh, co-chairs of the Environmental Committee.

|---|--|
| <i>ESG Factors in Risk Management/Financing</i> | <p>The 2007 Environmental Policy Statement states that the firm's "due diligence and risk management processes are designed to give appropriate attention to significant environmental issues." Due diligence includes environmental considerations for principal investing, including Morgan Stanley's private equity business. If Morgan Stanley has a member on the governing body of the company in which it invests, the firm will monitor the company's operations with respect to environmental compliance issues.</p> <p>While not a signatory to the Equator Principles, Morgan Stanley utilizes Equator Principles guidelines in its financing. The firm has adopted explicit limitations on financing or investing in projects that would, among other things: significantly degrade a critical habitat; support companies engaged in illegal logging; support extraction or logging projects in World Heritage sites; or violate local and World Bank pollution standards.</p> |
| <i>Staff Training/Education</i>                 | Morgan Stanley is creating new employee programs to encourage employees to reduce carbon and overall energy use in their personal lives, including a carbon offsetting program. The firm has also expanded its Investment Banking training program in the United States, Europe and Asia to incorporate the consideration of environmental factors into the due diligence process.   |

| Energy Efficiency                         | Northern Trust's in-house energy conservation team is responsible for presenting and implementing ideas to conserve energy around the corporation. The team has coordinated various initiatives to reduce employees' individual energy use. Northern Trust has also taken several measures to improve the energy efficiency of its facilities and upgrade video conferencing capabilities in an effort to reduce employee travel.   |          |           |                                   |                 |         |                  |        |                                |         |         |  |        |       |          |  |              |  |
| Other Climate-Related Investment Products | Northern Trust does not offer a specific climate-related product, but the company does have more \$22 billion in SRI assets under management. The investment management business unit, Northern Trust Global Investments, oversees the SRI services. In 2006, Northern Trust initiated the NTGI Socially Responsible Large Cap Equity Index. According to the company, this initiative was launched "in anticipation of growing client interest in these types of funds and screens with increased attention to the potential impacts of climate change on business." The company says that in 2007 it will launch its latest responsible investing product for institutional and personal investors. The new fund is based on the KLD Global Sustainability Index. In addition, Northern Trust's Compliance Analyst on-line compliance monitoring product contains a range of ESG extra-financial factors for use in its on-line system, allowing institutional investors to monitor the ESG compliance of their portfolio holdings. |          |           |                                   |                 |         |                  |        |                                |         |         |  |        |       |          |  |              |  |

# State Street Corporation

NYSE: **STT**

State Street Corporation, in its 2006 corporate citizenship report, states: "We consider it a corporate imperative to minimize our negative environmental impact... Improving our environmental performance is fundamental to our long-term sustainability." In 2007, the company launched its Environmental Management System (EMS), overseen by an Environmental Management/Corporate Sustainability team comprised of senior level executives. The EMS focuses on reducing the company's energy use and greenhouse gas (GHG) emissions. Through its investment management arm, State Street Global Advisors, State Street has developed environmental investment strategies to assess companies according to a climate risk framework.

**Summary Score: 36**  
(weighted)

## Company Information

State Street is the world's leading provider of financial services to institutional investors. The company offers a broad range of services that span the entire investment spectrum, including research, investment management, trading services and investment servicing, and securities processing. The company's State Street Global Advisors (SSgA) unit performs asset management services. Another joint venture, CitiStreet (with Citigroup), manages retirement and pension plans.

**Score: 1**

*Board Committee: Environmental Oversight* None identified.  
*Board Committee: Climate Change* None identified.  
*Board Member: Climate Change* None identified.  
*Board Role* State Street does not have a specific board committee assigned to sustainability issues, but in its 2006 sustainability report the company identifies "board oversight of sustainability issues" as a "future challenge."  
*Board Training* None identified.

## Management Execution

**Score: 10**

*CEO Leadership/ Statements* CEO Ronald Logue was selected as a keynote speaker for the 2007 Ceres conference, "Advancing Sustainable Prosperity." In his speech, Logue emphasized sustainability issues as key to sound business practice. Logue commented: "State Street is a proud member of Ceres and INCR [Investor Network on Climate Risk]... We all want to prosper, but corporate sustainability expands traditional model of success—which are mainly concerned with corporate growth—to include environmental and social goals... Operating in a sustainable manner is not just a good thing to do, it's good for business." Logue also listed in the speech the company's achievements and goals for energy efficiency and reductions of greenhouse gas emissions.  
 In his introduction to the company's 2006 corporate citizenship report, Logue again links sustainability initiatives with sound business practice, stating: "It's good for business, and it's good for our shareholders."  
*Company Policy* In its 2005 Environmental Policy Statement, State Street identifies the generation of greenhouse gases associated with fossil fuel combustion for the heating of its buildings as the company's primary direct environmental impact, and emissions generated from the company's electricity use as the primary indirect environmental impact of the company. State Street states: "We intend to identify verifiable metrics and create improvement goals for those activities we identify as significant... The EMS [Environmental Management System] we are deploying will help ensure a more rigorous and formal monitoring and review of activities with potential environmental impacts and help ensure that current conditions or performance do not deteriorate and goals are continuously reviewed and improvement is realized." In addition, the 2005 Environmental Policy Statement recognizes that "greater transparency on environmental risks is in shareholders' best interests."  
*Chief Environmental Officer* George Russell Jr., Director of Community Affairs, Executive VP  
*Levels to CEO* 1  
*Climate Change Executive* None identified.  
*Executive Committee* State Street has an Environmental Management/Corporate Sustainability Team, comprised of senior executives from across the company. The team meets quarterly to develop, deploy, maintain and report on the company's environmental program (including climate change-related initiatives).

| <i>ESG Factors in Risk Management/Financing</i> | <p>State Street does not have a blanket policy addressing ESG in its investments; however, according to the company's 2006 CSR report, the company's Global Fundamental Strategies group, a team which manages strategies that focus on individual stock selection does factor certain ESG criteria into its analyses. In particular, State Street's energy, utilities, industrials and technology analysts factor in environmental sustainability as industry growth themes. State Street claims that trends associated with expanding global environmental regulations and renewable energy mandates—such as growth in clean technology investments and the emergence of new global environment technologies—are taken into consideration by analysts.</p> <p>State Street has minority interests in Innovest and Governance Metric International (GMI), ESG research firms whose work has been incorporated into active and passive equity strategies to enhance the risk/return profiles of the strategies.</p> |   |   |           |                                   |                 |         |                  |       |                                |        |                |  |        |        |          |  |              |  |

|   | <p><b>CDP5 Risk Disclosure:</b> In its CDP5 response, State Street acknowledged a variety of climate change-related risks relevant to the company's business. Regarding regulatory risks, State Street pointed to the potential impact of climate change policies on targeted industries—such as utilities, energy, and chemical companies—and the need for climate risk assessments within industries and between peers. In addition, State Street noted a risk to financial service firms who fail to prepare to address a growing need from investors for offerings that consider climate risks and opportunities. Finally, State Street acknowledged potential physical risks presented by climate change, such as loss of utility services and damage to facilities.</p>   |   |   |           |                                   |                 |         |                  |       |                                |        |                |  |        |        |          |  |              |  |

### GHG Emissions Targets

|                        | Reduction Targets | Baseline Year | Target Year | Region      |
|------------------------|-------------------|---------------|-------------|-------------|
| <b>Total Emissions</b> | 5%                | 2006          | 2011        | Unspecified |

*Emissions Trading* None identified.

*Renewable Energy* State Street recently entered into a three-year energy purchase agreement with SUEZ Energy Resources NA. The agreement, which runs from March 2007 through March 2010, designates the State Street Financial Center, the company's corporate headquarters, to run on renewable power for the three-year duration of the contract. The facility represents approximately 20% of the total State Street electrical load in Massachusetts.

*Energy Efficiency* This year marked the initial rollout in North America of State Street's newly developed Environmental Management System. The company plans to continue its rollout of the system in Europe in 2008, and Asia/Pacific in 2009. State Street's EMS includes efforts to improve the energy efficiency of its facilities, including upgrading of existing Massachusetts buildings and meeting efficiency standards for the construction of a new London facility.

In addition, recognizing that air travel has a significant impact on greenhouse gas emissions, State Street has made significant investments in video and audio teleconferencing equipment with the aim of reducing travel. The company invested \$4.4 million in audiovisual products and services in 2006.

*Other Climate-Related Investment Products* State Street Global Advisors, State Street's investment management arm, currently manages environmental investment strategies that overweight companies with strong environmental sustainability while underweighting those with poor environmental practices. These products include a European Environmental Strategy and an International Environmental Strategy, both of which incorporate research from Innovest Strategic Advisors. State Street has also developed an investment strategy that seeks to hold companies that are well positioned due to climate change action. The strategy leverages nine investment themes that have exposure to new environmental products and services resulting from climate change legislation. SSgA is also in the process of launching a global environmental strategy for which carbon finance will be an investment theme. The strategy can hold publicly traded companies which can profit from the emerging global emissions trading market.

T. Rowe Price Group has not addressed climate change as a governance issue and has stated that it views the climate-related regulatory risks facing the company to be insignificant. The company recently created an internal working group to address company policy on climate change and to develop and implement environmental best practices and strategies. T. Rowe Price is pursuing Silver Leadership in Energy and Environmental Design (LEED) certification in two new office buildings, scheduled to open in 2009.

Wachovia announced a Commitment on Climate Change in October 2006, and is working to complete its first annual greenhouse gas (GHG) emissions inventory by the end of 2007. The firm has been expanding renewable energy contracts for its own operations and will open its first green financial centers in California at the end of 2007, followed by the implementation of a green financial center national strategy. These financial centers will be built in accordance with Leadership in Energy and Environmental Design (LEED) certification standards.

**Summary Score: 27**

## Company Information

Wachovia is a diversified financial services company that provides a broad range of retail banking and brokerage, asset and wealth management and corporate and investment banking products and services. The firm has retail and commercial banking operations across the United States and nationwide retail brokerage, mortgage lending and auto finance businesses.

## Board Oversight

**Score: 0**

*Board Committee: Environmental Oversight* None identified.

*Board Committee: Climate Change* None identified.

*Board Member: Climate Change* None identified.

*Board Role* In 2006, Wachovia received a shareholder proposal filed by the Service Employees International Union requesting that the company report on climate change challenges to business. After Wachovia agreed to develop an environmental policy, the proponent withdrew the proposal. However, the company had also challenged the proposal and received a no-action letter from the U.S. Securities and Exchange Commission to omit the resolution on the basis that it related to the company's ordinary business operations.

*Board Training* None identified.

## Management Execution

**Score: 9**

*CEO Leadership/ Statements* In an October 2006 press release, Wachovia Chairman and CEO Ken Thompson stated, "A healthy environment and the availability of natural resources are important to the long-term success of our economy, our business and our communities... Wachovia has a long history of working to better our communities, and protecting the environment is a natural extension of that commitment."

*Company Policy* Wachovia announced a Commitment on Climate Change in October 2006, along with a new set of Environmental Principles to guide overall policy. The Commitment states, "At Wachovia, we believe we have a responsibility to our shareholders, customers, employees and our communities to proactively do our part to reduce greenhouse gas emissions." The Commitment outlines policies and initiatives in five specific areas: Internal Operations and Real Estate, Product Portfolio, Mainstream Financial Services, Employees and Public Policy.

The Commitment also states that Wachovia "will research opportunities and develop products and services that increase our lending, investments and other financial commitments in activities that have a positive impact on climate change." Details on products and services are not given. However, Wachovia does state that the firm will encourage its most significant GHG emitting clients to annually report on GHG emissions and develop mitigation plans.

More generally, the firm's Environmental Principles include protection of local and global ecosystems, sustained access to natural resources, waste reduction/disposal and energy conservation. Wachovia also has a Policy on Forest Protection that applies to transactions with clients in the forest products, energy and power, metals and mining and building materials/home-building sectors.

*Chief Environmental Officer* Ken Thompson, Chair, Operating Committee, Chairman & CEO

*Climate Change Executive* Jeff Austin, Vice President, Corporate Real Estate, Innovation & Research

*Executive Committee* Wachovia's corporate Operating Committee has executive oversight of Wachovia's environmental strategy. In addition, an Environmental Stewardship Working Group, comprised of senior leaders from across Wachovia, meets regularly to lead development and implementation of environmental initiatives. Day-to-day management of environmental strategy is handled by the Environmental Affairs group. The Environmental Affairs group is headed by Senior Vice President Patrick Mumford and Vice President Daria Milburn. Additionally, Wachovia's Corporate Real Estate division is responsible for implementing the firm's emission reduction targets.

# Wells Fargo & Company

NYSE: **WFC**

Wells Fargo published a comprehensive “10-Point Environmental Commitment” in 2005. Since then, Wells Fargo has expanded the company’s climate governance, establishing an internal executive-level Environmental Affairs Council and an external Environmental Advisory Board. The company has also developed an Environmental Finance unit to increase its renewable energy financing. In 2006, the EPA identified Wells Fargo as the largest corporate purchaser of renewable energy in the United States, following the company’s three-year commitment to purchase 550 million KWh of Renewable Energy Certificates (RECs) annually. Wells Fargo also offers a variety of energy-efficiency loans. The company has provided over \$1 billion since 2004 in financing of Leadership in Energy and Environmental Design (LEED) certified buildings.

**Summary Score: 41**

## Company Information

Wells Fargo & Company is a diversified financial services company, offering retail and business banking, insurance, investment management, and venture capital investment services in the western and mid-western states. Wells Fargo is also one of the largest mortgage lenders and servicers. Wells Fargo offers insurance brokerage through its Wells Fargo Insurance Services subsidiary (formerly Acordia), and offers mutual funds, online banking, and online brokerage services.

## Board Oversight

**Score: 4**

*Board Committee: Environmental Oversight* None identified.

*Board Committee: Climate Change* None identified.

*Board Member: Climate Change* None identified.

*Board Role* In April 2007, Wells Fargo’s board of directors committed the company to completing greenhouse gas assessments of key lending portfolios, including agriculture, primary energy production, and power generation. The commitment came in response to withdrawal of a shareholder proposal requesting that “the Board of Directors formulate comprehensive emissions reduction goals relating to (a) the Company’s own operations and (b) the activities of its corporate borrowers, advisory and project finance clients, and the companies whose securities Wells Fargo underwrites.”

*Board Training* Wells Fargo says that its Management Committee and Board are “well informed” about the company’s environmental initiatives.

## Management Execution

**Score: 13**

*CEO Leadership/ Statements* Following the company’s unprecedented corporate purchase of renewable energy, CEO John Stumpf (then COO) remarked: “This purchase further demonstrates our company’s commitment to both environmental stewardship and environmental leadership and it reflects the desire of our team members to do what’s right for our customers, our communities, and our company.” Mr. Stumpf has also appeared on CNBC’s Mad Money to discuss Wells Fargo’s “green” initiatives.

*Company Policy* Wells Fargo established a “10-Point Environmental Commitment” in 2005. This policy includes a commitment to \$1 billion in lending, investments, and other financial commitments over the next five years to environmentally beneficial business opportunities. The company also committed to expand opportunities for customers to qualify for energy-efficient mortgage products and to look for partnerships and other opportunities to encourage the construction of green homes. In addition, the policy includes goals to reduce greenhouse gas emissions generated by company-owned facilities.

In October 2007, Mary Wenzel, director of Environmental Affairs, commented, “As part of our broader environmental strategy, we will continue to support the development of renewable energy sources and help our customers address rising energy prices through investments, products and education.”

*Chief Environmental/ Climate Officer* Mary Wenzel, VP, Environmental Affairs

*Levels to CEO* 1

*Executive Committee* Wells Fargo’s Environmental Affairs Advisory Council is made up of executive-level and senior-level managers from various lines of business, including Wells Fargo’s EVP and chief credit officer. In 2005, Wells Fargo also formed an external Environmental Affairs Advisory Board, comprised of eight environmental experts, to help the company anticipate environmental opportunities and integrate environmental decisions into business operations.

# Wells Fargo & Company

|   |   |
|---|---|
| <i>ESG Factors in Risk Management/Financing</i> | As discussed above, Wells Fargo committed to completing greenhouse gas assessments of key lending portfolios, including agriculture, primary energy production, and power generation. In addition, as part of Wells Fargo's environmental commitment, the company committed to enhancing due diligence in its lending practices in environmentally sensitive industries. This has been implemented through credit policies and trainings. Wells Fargo says that efforts to educate senior managers about the company's environmental commitment have led to the establishment of internal lending goals for "eco-friendly commercial businesses and green buildings." |
| <i>Staff Training/Education</i>                 | Wells Fargo's Environmental Affairs team participates in the company's Credit Management Trainee Program to ensure that team members who make credit decisions factor emerging environmental issues and regulation into their decision making.  |
| <i>External Initiatives</i>                     | <ul style="list-style-type: none"> <li>• EPA Energy Star Partners</li> <li>• EPA Green Power Partners</li> <li>• Equator Principles</li> </ul>  |
| <i>Investment Research</i>                      | Because the company does not provide sell-side research, Wells Fargo does not have a climate change-related research line. However, the company has issued a special report for individuals interested in investing in alternative energy. In addition, several retail banking branches have launched pilot "solar seminars" to educate customers on alternative energy technology.   |

| <i>Renewable Energy</i>                          | <p>In 2006, Wells Fargo became the largest corporate purchaser of renewable energy in the U.S., according to EPA's Green Power Partnership program. The company agreed to purchase 550 million KWh of RECs each year for three years, an effort which is estimated to prevent the emission of 350,000 tons of CO<sub>2</sub> each year.</p> <p>Wells Fargo has also established an Environment Finance unit in its wholesale business to focus on renewable energy financing. Since establishing this group, the company has invested \$370 million in renewable energy projects, including SunEdison's SunE Solar Fund III, a fund designated to deploy at least 20 megawatts (MW) of solar photovoltaic power at SunEdison customer sites nationwide, and the MMA Renewable Ventures' Fund III, which will support 10-15 MW of new distributed photovoltaic projects for customers across the United States. The company has also supported seven wind farms in Texas, Colorado, Minnesota and Maine that have a collective generating capacity of more than 1,000 MW.</p> <p>Wells Fargo has set specific lending targets to encourage its relationship managers to seek new green business relationships within priority areas – including sustainable development, agriculture, and clean technology. The company is diversifying its lending portfolio to include more renewables.</p> |                  |
| <i>Energy Efficiency</i>                         | Wells Fargo participates in the U.S. Green Building Council's "volume build" program to green the design of new Wells Fargo outlets. The company has implemented energy savings measures and upgrades in its new facilities, resulting in savings of up to 20 to 30 percent at many buildings. Wells Fargo is also increasing online banking and paperless ATMs to reduce paper use (and consequential indirect GHG emissions). The company, whose financial support for green buildings now totals more than \$1.4 million, is in the process of earning green building certification for all new retail outlets. Since 2004, Wells Fargo has financed 19 LEED buildings in 10 states, totaling more than \$1.4 billion in loans for LEED certified buildings.  |                  |
| <i>Other Climate-Related Investment Products</i> | Wells Fargo is the first U.S. financial services firm to offer renewable energy certificates through its credit and debit card reward programs. The company also offers tools to help customers with green home improvement decisions/purchases of energy efficient homes. In 2006, Wells Fargo introduced Green Equity Equivalent Investments to provide loans to non-profits that promote environmentally responsible practices in low-to-moderate income communities. Additionally, Wells Fargo makes RECs available to middle-market commercial customers as part of an electricity price hedging service.   |                  |
